Dear Mr. Baker,

As our nation focuses more sharply on domestic issues during the current national election campaigns, especially on the economy and family issues, I am pleased to send you a copy of The State of Families, 3 -- Losing Direction: Families, Human Resource Development, and Economic Performance by former Secretary of Labor Ray Marshall.* The book has a wealth of information and insight on how the economy affects families and can be a major resource for you and your staff through the campaign debates and beyond.

As Dr. Marshall makes abundantly clear, society can provide support and adopt policies to strengthen families. Therefore, in your important work as a policymaker, we ask that you analyze all human service programs from the perspective of their potential impact on families, work to establish as policy minimum acceptable levels of income, health care, nutrition, and housing for all Americans, and assure that all American families have available to them the services, knowledge, and opportunities to reach beyond minimum standards of living and to care for themselves to the greatest extent possible.

Family Service America, Inc. (FSA), and its 280 member agencies with offices in more than 1,000 communities throughout North America are committed to working for the development and improvement of family-oriented policies and practices in both the public and private sectors. To help you help families succeed, the public policy office of FSA offers its assistance for investing in the future of American families by seeking policies that assure

- Safe housing and neighborhoods
- Affordable and accessible universal health and mental health care
- High-quality education and job training coordinated with comprehensive human services that bring the schools into partnership with the community
- Meaningful employment opportunities and workplace programs that are supportive of family life

- Proper nutrition for the nation's children and their families
- Adequate financial and tax support that promotes family economic viability
- Rehabilitation for substance abuse and family violence

We look forward to working with you in the development and improvement of such policies. For information and assistance, please contact Ron Field, FSA senior vice president for public policy, in our Washington, D.C., office at (202) 347-1124.

Sincerely,

A handwritten signature in black ink that reads "Geneva B. Johnson". The signature is written in a cursive, flowing style.

Geneva B. Johnson
President and CEO

GBJ/pr

- * The distribution of the book to you and to all U.S. senators and representatives, the President and his cabinet, the governors of all 50 States, mayors of the country's 250 largest cities, and those cities' school superintendents and school boards is made possible by a grant from the Carnegie Corporation of New York.

Executive Summary

The State of Families, 3--Losing Direction: Families, Human Resource Development, and Economic Performance

By Ray Marshall

The basic message of The State of Families, 3, is that the strength of families and the strength of the economy are inextricably linked. Ray Marshall describes the major changes that have occurred in American family life, particularly since the 1960s: Families have become much less stable than they once were and many more children than previously are growing up in poor, mother-headed families. He argues that many families no longer provide good environments for children's learning and development, and this will negatively affect the quality of the American work force in the next several decades.

Chapter 2 underlines the point that human resource development is essential to American economic success. Workers must increasingly be prepared to function in jobs that demand attention to quality, productivity, and flexibility.

Chapter 3 describes the changes that have occurred in family structure in America over the past several decades, namely that families are smaller and fewer people live in family households; families are more dynamic and heterogeneous in composition; and a growing number of children are being born to unwed mothers and are more likely to be raised in poverty.

The fourth chapter analyzes the growing economic inequalities between wealthy and poor families. It also notes that wages of working women helped shore up family incomes during the 1970s and 1980s, as real wages of men declined.

Chapter 5 compares American families with those in other industrialized countries. The major findings are that Americans have a higher divorce rate, a higher rate of births to unmarried women, a larger percentage of single-parent households, and a higher percentage of children living in poverty than do our counterparts in Europe and Japan.

In Chapter 6, Marshall examines an array of family-policy issues, ranging from corporate supports for family life to welfare reform. He discusses the effects of increased maternal employment, divorce, and family instability on children's lives. Several areas are highlighted as national, social and economic priorities: child care, early childhood education, and school reform. Marshall argues that traditional public schools must be transformed if children, particularly minority children, are to acquire the education they need to function in a rapidly changing world.

The last chapter summarizes the changes in family structure and family relationships that Americans have experienced in recent decades. These changes, Marshall notes, have created serious financial, moral, and intellectual hazards for American families. He advocates several policies to strengthen families, focusing on the needs of poor children, single-parent families, and working parents. Marshall also argues that family policies should be integrated with local, state, and federal government social and economic initiatives. He concludes with several recommendations about ways to improve the U.S. education and employment-training systems.

September 11, 1992

Mr. James A. Baker, III
The White House
1500 Pennsylvania Avenue
Washington, D. C. 20220

Dear Jim:

As you may recall, I gave you a few suggestions for George Bush's campaign four years ago and I cannot resist doing the same again now. I think I have been pretty consistent, at least, in my ideas. For your information, I am enclosing a copy of that letter. As you can imagine, I thoroughly approve of the recent emphasis on economic growth.

I have two ideas for the campaign. The first relates to the budget and taxes. I certainly agree with Bush's growing "no tax increase" stance. As expected, he is getting hit with the same old arguments that we must accept the reality that we need tax increases. The Heritage Foundation offered an interesting solution back before the budget deal and tax increase in 1990. I think you could use the idea now. Bush should ask Congress to make a binding agreement with him to restrain total spending growth over say the next five years to the rate of inflation, say 4.0%. Logically interest on the debt and the S&L costs would not count in the agreement. He should refuse, before the agreement is made, to say what spending proposals he would recommend. By talking only about the concept, the special interest groups would worry, but what could they do. They would have no specific cuts to oppose. Congress would be upset, certainly the Democrats, but the public, i.e. the voters, would likely think the concept was great. As the President could say, nothing would have to be cut because spending would still be able to rise. But certainly the voters would agree with the general concept that growth in some areas could be below 4%, some things actually reduced and a few even eliminated. These would all allow other more worthwhile programs to rise more than 4%. It seems clear that the fear of outright cuts is what beneficiaries of programs really worry about and this fear makes it very difficult to campaign on spending reductions. Once the President makes this proposal, he could stress it and thereby avoid any further talk about budget cuts.

President Bush could then say that after the agreement, choices would have to be made, as they should be, and by the political process, Congress and the President negotiating. It is hard for me to see why this would not be very popular with voters, almost all of whom think government spends too much even though most are concerned with talk about specific actual cuts which would affect them. Bush could then point out how a strong

economy usually produces 7% or so more tax revenues each year without any tax increase. It is surprising how quickly the deficit declines if revenues go up 3% faster than spending. This would be a very concrete plan the President could offer to deal with the deficit which Clinton does not have. Once this plan gets underway, he could say, he and Congress could focus on ways to increase economic growth which would reduce the deficit even faster. It seems to me this concept allows Bush to focus on the positive of growth, not the negative of spending cuts.

My second suggestion, actually it is a plea, is that Bush let up a bit on the "family values" theme because it has gotten so distorted by some supporters on the extreme right. It sounds as if the Republicans are against working mothers. Can't he go back to what I recall as the original issue? It was that many of our well-intentioned social programs put financial incentives into place for husbands to leave home and break up families. Welfare has also discouraged work and needs to be reformed. Education reform relates also but not as directly. I get the feeling that the Democrats have been changing on these issues and are gaining politically while the Republicans are losing ground because Marilyn Quayle and others are making it sound as if the most important issue is the decision to forego careers in order to stay home with children.

I feel equally strongly that the abortion issue is a terrible one, but I assume you can't do anything about it. I don't know why Bush can't take the position that he is against abortion personally, but the law of the land is that it is legal. Reagan, who seemed genuinely much more opposed to abortion than Bush does, never got caught up in the issue or really tried to change laws.

In summary, Bush seems to believe he has to cater to the Republican right on social issues when he really should be using growth economics to satisfy conservatives.

It was good to see you last June. I think everyone felt it was a great reunion, rain on Friday notwithstanding. Good luck in the campaign.

With best regards,

John J. F. Sherrerd

Encs.

P.S. Shouldn't the fairness issue be answered with data such as the enclosed? There is a lot of data of this kind, but Republicans never seem to quote it. The voters will not be concerned about high income people making more if they know how much taxes they are paying and how their share of tax payments has risen under Reagan-Bush economics.

TWO BALA PLAZA · BALA CYNWYD, PENNSYLVANIA 19004 · 215-668-0850

June 15, 1988

Mr. James A. Baker, III
The White House
1500 Pennsylvania Avenue
Room #3330
Washington, D. C. 20220

Dear Jim:

I am sure that I am not alone in my distress about George Bush's campaign to date. The difference between me and others is first that I know you; and, second I am presumptuous enough to be convinced that I have constructive suggestions to make. I hope that you have time for a quick read and consideration of my ideas. You will note that I have left a large number of blanks where certain statistics should be. I have not taken the time to research them, but feel sure they are favorable to the points I am making.

Before I begin I want to assure you that I am no right wing idealogue. I have voted for many Democrats in the past, including Hubert Humphrey, for President. I consider myself a liberal on most social issues, although becoming more and more skeptical of Federal Government's ability to solve most problems with large spending. I was attracted to Ronald Reagan after he won the nomination in 1980, definitely not before, and was strongly against him in 1976.

As I think you know, however, I have become a very strong believer in the economic policies that you and the others have forged over the last seven years. I was in favor of them at the beginning because they seemed sensible and now because I believe they clearly have worked. I think Reagan's economic policies have been much more like those of John Kennedy than those of Richard Nixon. Much as I hated all of Nixon's Watergate problems, I thought his economic moves were almost as bad for the country.

I am further convinced that even though many, or even most, mainstream Republican economists and businessmen were against Reaganomics in the early 1980's, the voters agreed with it. If there had not been this support by the voters, including, of course, many registered Democrats, tax cuts and later tax reform would, of course, never have passed. Bill Bradley's support is additional evidence of this broad support among voters of these directions.

I am sure you are in agreement with what I am saying, so what is my point? It is that George Bush doesn't seem to understand this. He may still be skeptical of the great benefits we have been seeing, and will continue to see in my opinion, or he may underestimate their popularity with voters. If Reagan had listened to so-called mainstream Republicans, he would never have campaigned on these policies. If the Democrats are right that Reagan won primarily because of his personality, why has Mrs. Thatcher also been surprising the experts with her popularity? She does not have Reagan's personality, but she has most of the same policies. I should add, she has also done wonders for a previously sick economy.

I think George Bush is letting the press and the Democrats put him on the defensive when he should be the aggressively positive candidate. If he is, he will put Dukakis in a tough spot because he won't dare, for good reasons, campaign against these successful policies. Let me give you a few examples:

1. Taxes

The Reagan-Bush administration successfully first cut virtually everyones taxes and then greatly reduced marginal rates. Why shouldn't Bush pound away on this issue? He should not only pledge not to raise income taxes (or probably any taxes), but also explain why he believes raising taxes would be bad for the country; emphasize how economic growth since the tax cuts became fully effective in 1983 has constantly surprised those economists who were against them. And the decline in inflation also surprised those who thought the tax cuts were bad economics or, at best, poorly timed. He should emphasize that he eliminated income taxes for millions of low income families and 80% (I think the approximate amount) of all taxpayers are now in a maximum 15% tax bracket. He could also say that (As R.R. might phrase it), "Yes, some upper middle and high income tax payers got a tax increase in 1987 due to the loss of deductions, but they will all get the future benefit of a lower marginal rate. It is this lower marginal rate for all tax payers which has greatly increased the incentives to work and the result is record employment and the lowest unemployment in ___ years."

Jim, this has to be a good sales pitch because it is true. The Democrats, most of them at least, clearly believe it or they would be campaigning to reverse what all of you did. They certainly are not. The most they do is make generalities about tax breaks for the rich. Why can't George take that on directly as well by pointing out that the highest income tax payers are, because of the changes, both paying more in taxes and also a higher portion of the total tax revenues. Isn't this exactly

what liberals should want, i.e. the wealthy to pay more? I am sometimes amazed at how little publicity that fact has gotten. As a variation of it, one of my good friends here in Philadelphia, Princeton '46 I might add, expressed amazement when I mentioned that the top 1% of taxpayers paid something like 26% of all income taxes, up from something like 23% before the Reagan tax changes. I can't help but believe that the average voter, including blue collar workers, many of whom voted for Reagan, would be impressed by these figures. The top 1% certainly have much less than 26% of the income.

I think the budget is an issue he can and should also address head on. He should state something like "Those who said 'our' tax cuts would raise the deficit were wrong. Ever since the recession necessary to break the back of our inherited inflation was over and our tax cuts in the early 1980s were implemented, tax revenues have been soaring and continue to soar. In fiscal 1988 they will have recovered to a higher percent of National Income (GNP?) than before the cuts." At this point, on TV at least, he could have a chart showing this. (See enclosed) he could then emphasize that spending increases have been the problem, up from about 20% (?) of GNP to 24-25% (?) although recently starting to decline as we have continued to fight Congress's attempts to increase it.

He should admit to having been skeptical about Reaganomics when he campaigned against R.R. in 1980. "But, I am happy to admit I was wrong. The proof of its success is easy to see. The Democrats don't want to admit this success, of course, but it is interesting that they don't campaign for the old tax system."

He could then constantly remind voters that Dukakis is leaving the door open for some tax increases "as a last resort". "I will leave it to you, the voters, to decide whether the party with all the spending proposals - even if they only accept a fraction of those Jesse Jackson and Ted Kennedy are openly suggesting, will have any choice but that last resort they talk about." Why not ask audiences:

"How many of you think the Democrats will raise taxes if they gain control of the White House?" I would be very surprised if a very large percent of voters did not think the Democrats will try to raise taxes.

"And do you really believe they will only tax the rich? Ask Mr. Dukakis how much revenue he thinks they will get by raising the marginal rates on only highest incomes? We proved you get more from the wealthy by lowering rates. They will very soon be back raising taxes on the middle class because they know that is where the dollars are."

2. Deficit & Defense

A fair question to ask us is about the deficit which, while well down from the peak, is still way too high.

"As I have pointed out, it is not due to a lack of tax revenues. We are still getting in taxes as big a percent of GNP as we did eight years ago, and GNP is way up. (Give a \$ or % figure.) Spending is way up, that is the problem. It has risen by _____ amount and the Democrats still say we should spend more.

"Isn't higher defense spending which we campaigned for part of the spending problem?

"It is only if you take just the last few years. But the reason we campaigned on a platform of strengthened defense is because of what occurred in the previous 10-20 years.

"In 1960 we spent 52% of our budget on National Defense. During the Kennedy years it never went below ____ %. By 1980, however, it had dropped to ____ %. Looked at another way, we spent 9.5% of our GNP on National Defense in 1960 and by 1980 it was ____ %. This would not have been so bad if Russia was also cutting back. But they increased their share of GNP going to the military from ____ % to ____ % between 1960 and 1980. (Why not also have a simple chart, at least for TV, showing this change?)

"We said we needed more strength before we could make progress through negotiations with the Russians. We built that strength and an interesting thing happened. The Russians came to the table and negotiated realistically for the first time a year or two ago and we are now achieving some historic break throughs. Why didn't President Carter have any success? He got only a few minor agreements which the Russians did not live up to. The main reason was that we had reduced our strength and he was negotiating from weakness.

"We can't let our defense deteriorate again or the Russians will quickly see that we are losing our bargaining power. But, we don't need the sizable build up we had between 1981 and 1986.

"Defense is now about 6.4% of GNP, yes up from ____ % in 1981, but still well below the ____ % + of the Kennedy years.

"What do most, fortunately not all, Democrats suggest? Big cuts in defense. They say that is where they will get revenues for new domestic spending. Do we want to risk getting back into the cold war mentality we Republicans have worked so hard to reduce? (Why not have him ask audiences "How many of you think the Democrats will make large defense cuts?")

"And while we are on domestic spending, do the Democrats have a case that we have cut way back and now more is needed? The facts say otherwise.

"Domestic spending, non-military non-interest, accounted for 7.3% of the 1960 GNP. Last year it was 13.3%. This is an increase of ___% over 20 years. Because the Democrats have controlled Congress most of the time during the Reagan years it has actually risen ___% since 1980. This is a sizable amount in inflation adjusted or real terms. Does it seem to you like we need more social spending or better control of it? Do we need a Congress to present a President with a 2000 (?) page spending bill for \$___ billion which he must either accept completely or veto and close down the Government for a time?

"Think what will probably happen if the Democrats get control of the White House as well as Congress. The President will be encouraging even more of this rather than fighting it as we will. Are the Democrats recommending a line item veto to help control ridiculous pork-barrell items in the budget? I am and will fight for it. Remember ___ states have a line item veto and I hear no talk of repealing it in any state. (It would be interesting to know if Mass. has a line item veto. If they do, Bush could ask if Dukakis used it or worked to repeal it. If he used it, why would he not join in strongly recommending it for Federal Government.)

"Reporters and commentators say no one has a plan to cure the deficit and all are ducking the issue. Well, I have a clear plan and do not want to duck the issue. I will be campaigning on the issue of reducing the budget because it is very important that we do so.

"Revenues have been rising at a 7-8% annual rate (?) for ___ years and we have spending down to 4 1/2-5%. We plan to reduce the rate of spending a bit more but, most importantly, keep the healthy growth in the economy. The deficit is shrinking and will be virtually eliminated by 1992 if we pursue the Reagan-Bush economic policies. But continued growth is important. We don't have to reduce the deficit with more taxes on the backs of American workers. The Democrats have a real problem. They want to spend more and that is obviously bad news for the deficit. So they then say, "as a last resort we will raise taxes". But, of course, tax increases will jeopardize economic growth and reduce, not increase, growth in tax revenues. I feel for them because they are in a Catch 22. This is why you have been hearing for several years that the Democrats have a problem attacking Reaganomics. They say it is terrible, but never say how they will change economic policies. They say it has caused problems, but then can't explain rapid growth in employment, low inflation and a shrinking deficit. They then say that although things look pretty good now, they will get terrible. The only trouble is they have been saying this for several years, but things keep getting better not worse.

"Many are telling me I should be specific about my own beliefs. I am happy and anxious to do that and will be, but don't expect me to differ from President Reagan's policies which I believe are sound and good for the country.

"I plan to run a very positive campaign because the Reagan/Bush administration has much to be proud of. My campaign will be based on our accomplishments and the ways in which I will work to keep the country strong. We have strengthened our defense and the economy. A Bush administration will continue these objectives. The job obviously is not finished. The deficit is getting smaller, but is still much too large.

"Everyone now has lower tax rates on any increases in income they earn and the lowest income group have had Federal income taxes eliminated. When you lower rates as we have done, you increase incentives. And this is working. And when you earn more, the reduced inflation we have achieved means that more of it is real. The Democrats want to raise your rates even before the full beneficial effect is seen.

"Everyone is saying that the Republicans cannot get much of the black vote. I don't believe that. I can understand why black voters would support Jesse Jackson in the primaries. Their pride is understandable and many do not think their alternatives were very good. Our campaign for black votes will not be based on the promise of more or enlarged programs which haven't worked. We think many blacks understand how we have created more economic opportunities for them. They have the same aspirations as whites do. We have created more jobs and will continue to work against discrimination so they will have real equal opportunity.

Obviously I made this way too long Jim, for which I apologize. But, I had to get it off my chest. I hate to see Bush getting headlines accusing Dukakis of being "too liberal." Or he is quoted as complaining about Dukakis's Harvard advisors. If he talks positively about these issues, no one could accuse him of being negative or personal. All he really has to do is understand and accept what you all have accomplished. He seems to me to be too decent a man with too much going for him to get caught in a defensive negative campaign.

Let me add that I don't believe everything is perfect by any means. I think some good trends are underway and, if they can be continued, things will look much better in a couple of years. I just feel that Bush should have the upper hand if he campaigns on the achievements of the last seven years.

I would love to have even a very brief or quick reaction from you.

With best regards,

John J. F. Sherrerd

P.S. I am sure that you do not need more things to read, but if you are interested I am enclosing a copy of a speech I gave to the Financial Analysts Federation Convention a few weeks ago in San Francisco. I refer to some of these issues and concerns in the speech.

Enc.

P.P.S This Russell Baker article is a perfect example of what we are all concerned about. I don't expect to change how Bush reacts to certain issues or what he says about a lot of things, but I can't see why he seems reluctant to use his strengths.

Dear Chief of Staff, James Baker,

My name is Sherry Groover. I am a Senior and Public Administration major at the University of Central Florida. I am presently enrolled in a presidential campaigning class and have been instructed to choose a delegate for the 1996 election and plan a campaign strategy. I have chosen you as my delegate and would greatly appreciate your cooperation in explaining your position on a few issues. I would also appreciate some information on your personal background.

Please fax this information as soon as possible to: (407) 846-3074 Attention Sherry Groover.

This will insure the development of my delegate introduction before September 25, 1992. Thank you very much for your cooperation.

Sincerely,

Sherry Groover

Dear Secretary Baker:

W
In 1989, you responded to a letter of support sent to you by Rob Quartel on my behalf. I had worked with Rob on the 1980 Bush campaign, and your referral in 1989 to Abe Sofaer was instrumental in providing me the opportunity to work at the State Department on a range of issues during the course of the last three years. I simply wish to thank you for this opportunity.

I have recently decided to return to the private sector, and to my home state of Delaware, where I will join a new joint venture company established by Du Pont and Merck. I would be pleased to hear from your staff or from the campaign if there is any way in which I might assist the President's re-election effort.

Sincerely,

John E. Osborn

December 3, 1991

Honorable George Bush
President of the United States
1600 Pennsylvania Avenue
Washington, D. C.

Dear President Bush:

To refresh your memory, in 1988 I headed a voter registration drive in Cook County which successfully, verifiably registered over one hundred thousand (100,000) new voters. I also raised the several hundred thousands of dollars needed by that voter drive. I also organized and sponsored the rally at St. Simeon in the 10th Ward which was a monster success. Since then, I never heard from anyone in your campaign - never, ever - except from Ed Murnane. So much for a bruised ego!

What really matters is our country, its people and who is best to lead it as its President, and how? The easiest answer to give is that you, George Bush, Republican, is without question the best man for the job using basic party values and beliefs.

The fact is that I couldn't fill a hall for your re-election campaign with you present. You, our Commander-in-Chief during the Persian Gulf War - You, our President during the fall of communism! One reason that a hall can't be filled is that people believe that you don't have a clue about our economy. You can't keep saying that everything is OK when it is not. We would all respect you more if you said that we are in a squeeze right now, but together we will work our way out - maybe, with less defense spending as one example. Ask us to be patient, and tell us together we will climb out of this. Admit you misjudged, misevaluated or even made a mistake - but no more rhetoric!

Another reason that we couldn't fill the hall is that we have a large population of Croatians and Serbians within our 10th Ward Community. All of us, both Croatians and Serbians, are appalled by the non-action of the United States to stop this bloodshed. This United States non-action really hurts, for all the obvious reasons. We have blood relatives in Yugoslavia - but no oil!

Page 2

What I know is that we need to see a George Bush that we thought we knew. A George Bush who cared; who was sincere and down to earth; who listened; who would never, ever duck a tough question; and, most certainly, was not the same old "full of baloney" politician we've too often seen.

I wish you, and our country, the best of everything.

Very truly yours,

Edward R. Vrdolyak

James Baker III
Former Secretary of State
White House Chief of Staff
The White House
Washington D.C. 20500

Dear Mr. Baker,

I am corresponding about the second term of office which you and president Bush are striving to achieve.

While serving as Secretary of State you traveled to many Nations and saw first hand the tragedies that war and poverty can bring.

In order that president Bush should be allowed to achieve his victory in November your cooperation is paramount. Within the enclosed material is a story which is told in a Planetarium. Upon reading this material you will discover that the outcome of a presidential election can be predetermined or influenced.

What I am requesting is for you to execute your authority to provide me and my undertaking (as explained in the Planetarium story) with a Government Grant in order that president Bush and I might succeed in our endeavors. I am sure you will understand the nature of this request once you have read the enclosed material.

I hope you will give this matter your full consideration.

I am most grateful.

Sincerely,

Robert Wollner

***** VISIT THE PLANETARIUM *****
And Be Astounded

!!! BEYOND BELIEF !!!

The incomprehensible awaits you at the Planetarium

- Look into the future of humanity as you never imagined it could be.
- Enter the bazar world of the future where mysteries of the universe are revealed.
- Witness a story that came from "Beyond the Earth". And you won't believe your eyes.
- These are the facts that have eluded man for so long.
- This incredible information could only have come from "Outer Space". It was transmitted to the earth from beyond, and awaits you at the PLANETARIUM.
- Not Science Fiction or Make-Believe. The truth will unfold as you never imagined it could be.
- The show takes approximately 3 hours to see. Don't miss it. (Or read it, in this material). You will be astounded.

SHOW AT THE PLANETARIUM

INTRODUCTION

Welcome to the innovative world of Robert Wollner. The highlight of the Fun Park is the spectacular and incredible story presented in the Planetarium. Believe it or not, this information was transmitted to the earth from beyond, and tells the origin of man. And it is more bazaar than you can imagine. Beyond that, there is much to see and do when visiting the Fun Park.

Take a ride in a plastic ball that spins around you as it rolls down the track, passing through loops, turns, and down hills. The "Ball Ride" is more exciting than a Roller Coaster.

Breathtaking, multi-colored fountains await you at the "Fountain Walk" where water has been turned into a kaleidoscope of colors and dazzling scenes.

Ride the Tunnel Car, America's newest transportation system. See scenes of deserts, forests and mountain scenery. Pass through scenes of swamps, canyons and rugged terrain. Travel over scenes of lakes, rivers and cities. Tunnel Car Service will be available in the near future between Los Angeles and Las Vegas.

Ride a Balloon high into the sky. A panoramic view of the park can be seen from the Balloon Gondola.

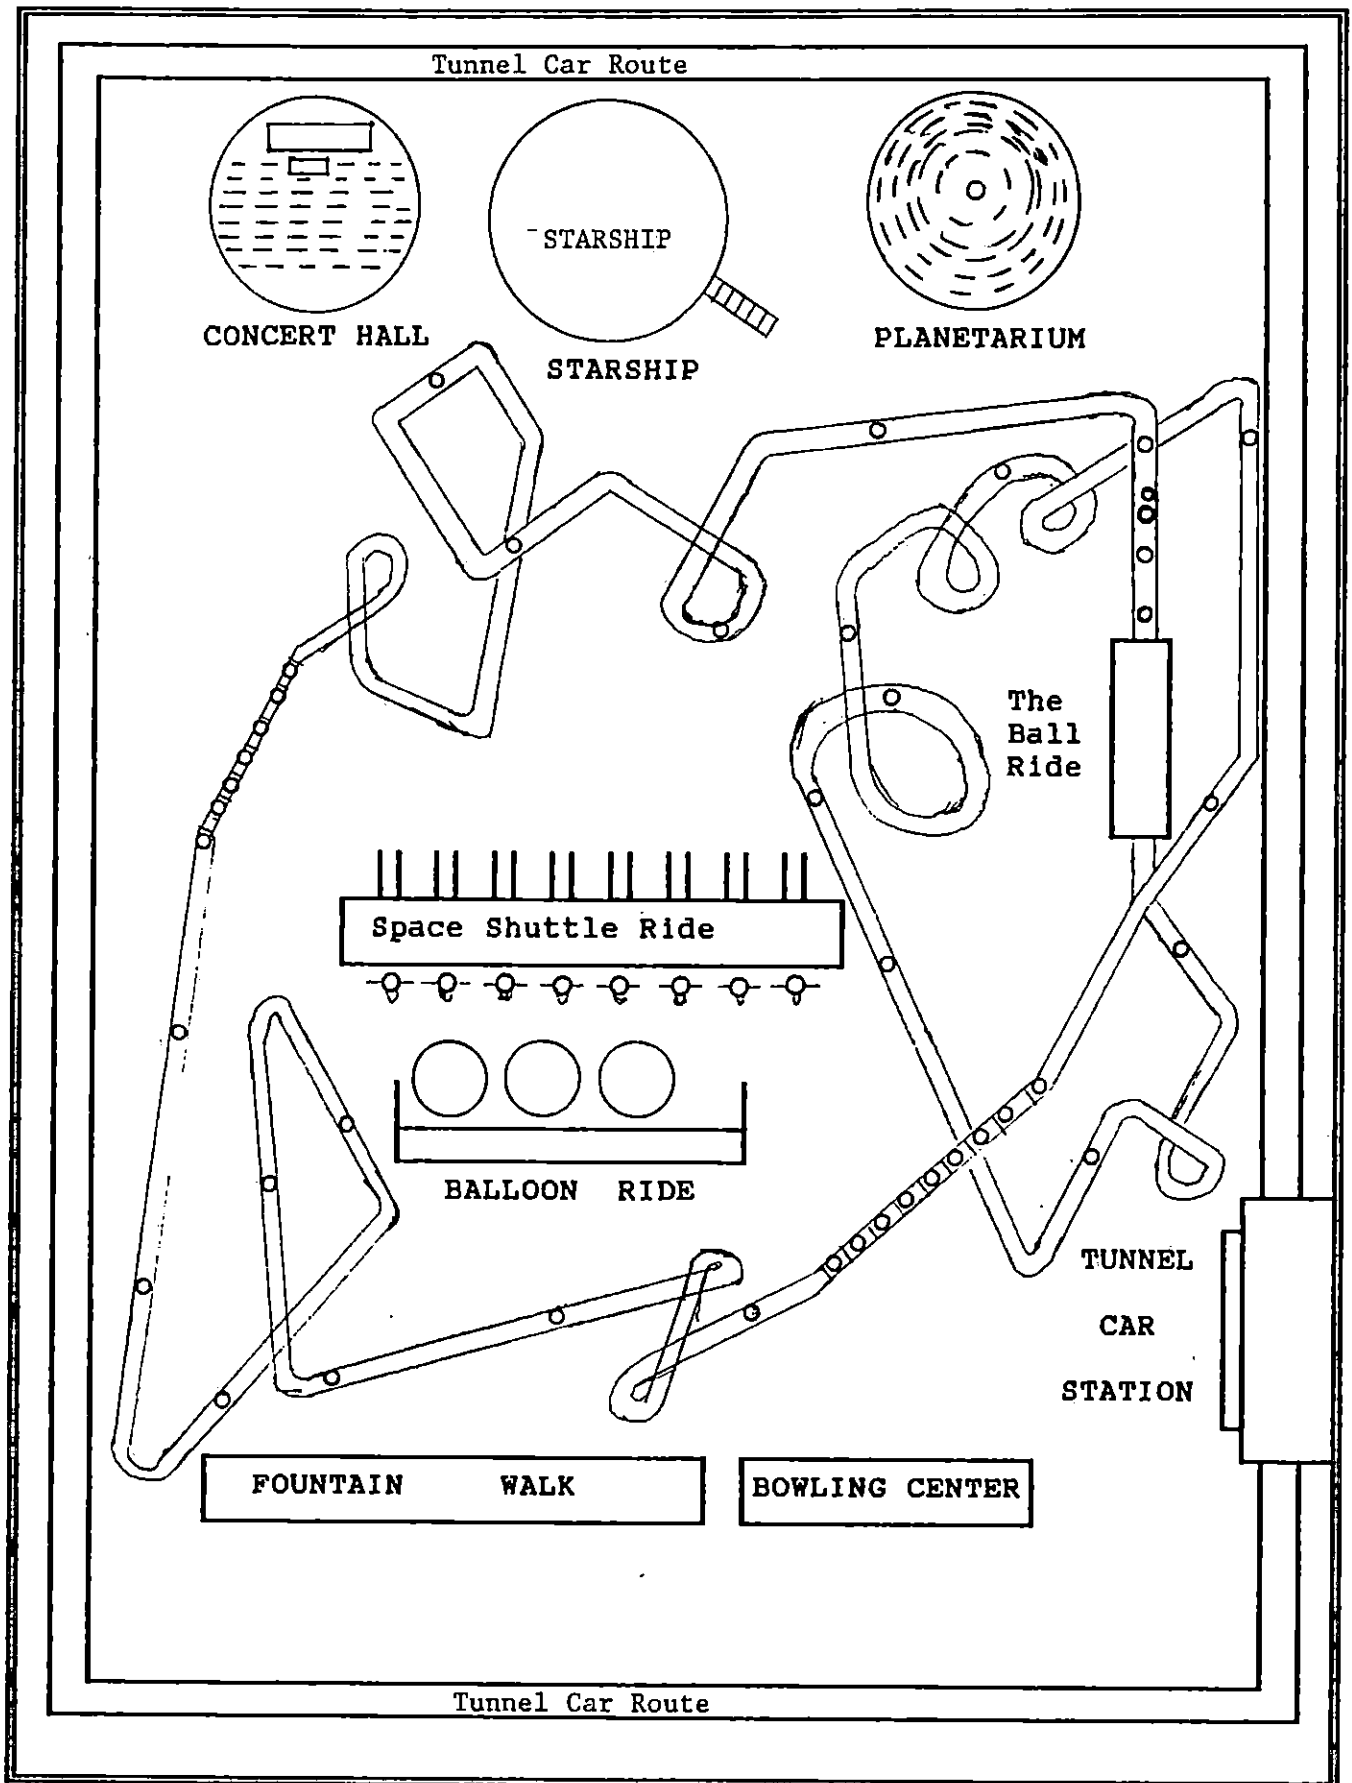

Tour a Starship of the future. Learn how man will travel through space and the technology that will make it possible. The huge Starship is as big as a 5 story building.

Defy gravity in the Space Shuttle Ride launch, as you are hurled upward. Feel the "G" Forces take hold of your body.

On Saturday nights and Sunday afternoons visit the Concert Hall where some of the nations biggest names in talent will perform for you. The concerts will also be seen on National Television.

But above all. Read about now. And visit later when the Fun Park opens in your city, the incredible story presented at the Planetarium.

Diagram of the Park

DESCRIPTION OF THE RIDES AND ATTRACTIONS

Only a brief description is given for each ride. The Story at the Planetarium is presented in its entirety.

THE BALLOON RIDE

Ride in a gondola that is attached to a steel cable, while a huge gas filled balloon rises to a height that allows a panoramic view of the Park and surrounding area. Then the steel cable brings the balloon back down to the ground.

FOUNTAIN WALK

Walk through a long dark building that has breathtaking, multi-colored fountains on both sides of a walkway. The kaleidoscope of colors and sparkling scenes will take your breath away. Over 100 fountains are on display.

THE BALL RIDE

Ride inside of a plastic ball large enough for two. The front swings open to enable riders to enter the ball and take a seat. The seats are attached to large wheel bearings that remain stationary while the ball turns around them. The heavy weight on the bottom of the seats keep them stationary while the ball is rolling. The ball rides in a track and moves like a roller coaster down the track, down steep hills, around curves, up hills, through loops. When the track loops, instead of turning upside down, the riders remain upright inside the ball. The plastic ball has no motor, it moves down hill by gravity and centrifugal force, gaining speed as it travels. At the end the ball is stopped by a water pond. A pulley or lift then pushes it back up to the top. The ball ride is a high speed thrill ride. It is a fairly long ride and travels all around the Park.

THREE LANE BOWLING GAME CENTER

Robert Wollner has invented a new Bowling Game called "Three Lane Bowling Game". Visitors to the Park can enjoy playing this new Bowling Game at the Bowling Center.

FOOD AND SNACK BARS

Food centers, snack bars and gift shops are located around the Park.

TUNNEL CAR RIDE

America's newest transportation system is the Tunnel Car. The Tunnel Car is a high speed vehicle which rides on a track inside a plastic tunnel. The plastic tunnels the car travels through are supported above the ground by steel support rods. The tunnels can be quickly erected through any terrain such as deserts and canyons, through swamps, forests, mountains, etc.. The Tunnel Car can go where other forms of transportation cannot and is completely protected from the weather. The cars that travel through the tunnels seat a maximum of six people. Cars travel down the track individually, in single file. The tunnel car travels at approximately 250 miles per hour. It operates like a flat electric motor. While the electric motor turns at high speed by magnetic repulsion, the tunnel cars are magnetically repelled down the track by magnetic repulsion. The cars are supported above the magnetic track by a suspension system. When building a road or a train track the ground must be made flat

before the highway, Interstate or train track can be laid down. This means great expense, equipment and man hours. When building Tunnel Car Routes the light weight plastic tunnels snap together at both ends. Then they are weather sealed and can be erected quickly. They are brought in by truck and helicopter. The steel beams that support the tunnels are cemented into the ground. The helicopter lowers the tunnel right onto the steel beams. The tunnel is then bolted in place. Since the plastic tunnels are above the ground the ruggedness of the terrain is not a problem as with building a highway or laying a train track.

THE TUNNEL CAR

A ride on a tunnel car is an enjoyable experience. Each tunnel car is a luxury vehicle with large comfortable seats. Seat covers are used to protect the seats and are changed after each use. By pressing a button on the dash in front of each passenger, a computer screen comes up. Or down.

Since the tunnel car, like an automobile, has no bathroom, rest stops are located along the tunnel routes. By pressing a button on the dash the computer is alerted to stop at the next rest stop. If the passenger wants to know how far the next rest stop is, they bring up the computer. The computer will display a map which shows their location on the map and where the rest stops are located.

The computer screen is connected to a VCR for watching movies. Video movies can be rented at the Tunnel Car Station or passengers can bring their own. Music can be enjoyed with headsets.

The tunnel car is equiped with stereo cassette players. Passengers bring their own music or rent cassettes at the tunnel car station.

A tunnel car seats 4 people. The jumbo tunnel car seats 6 people. Passengers specify when purchasing their ticket which size car they will need. Tunnel cars are equiped with heaters and air conditioners.

THE TUNNELS

Tunnels traveling through scenic areas may be open on one side or both sides to allow a better view. Beautiful mountain scenery, for example, can be seen more clearly this way. Weather sensors in the tunnel along the way will close the tunnel if inclement weather occurs. The tunnel car routes do not follow highways. They travel through the most scenic routes across remote areas.

During the Spring and Summer months open tunnels may be preferable to the closed tunnels. When traveling during the winter passengers want to be snug and protected from the harsh winter weather in a protective tunnel. In the Spring and Summer passengers want to enjoy the weather and scenery. In order to do this they need an unobstructed view. Traveling in a plastic tunnel can obstruct the view. So this is why

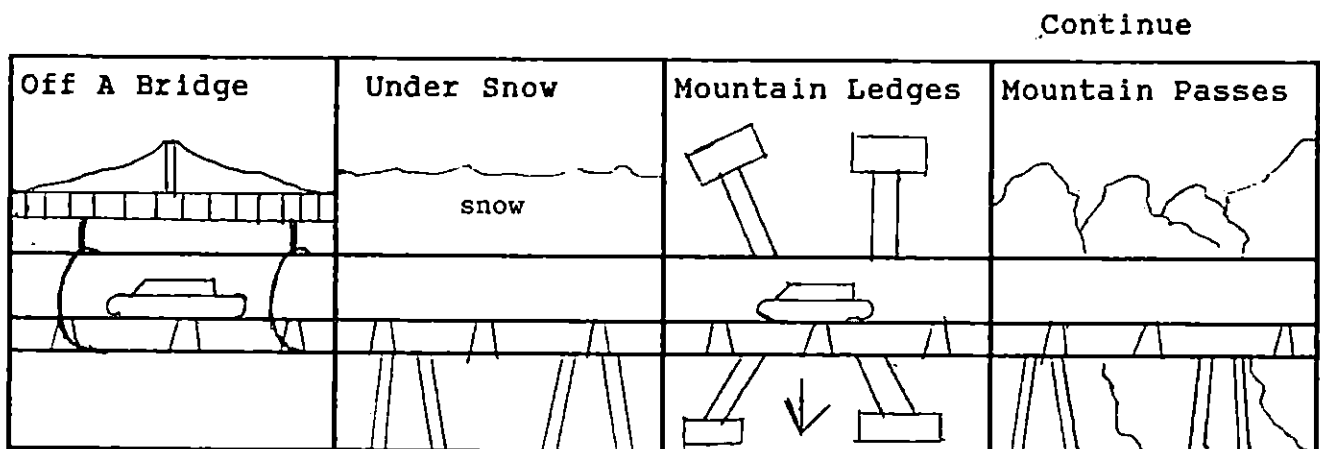

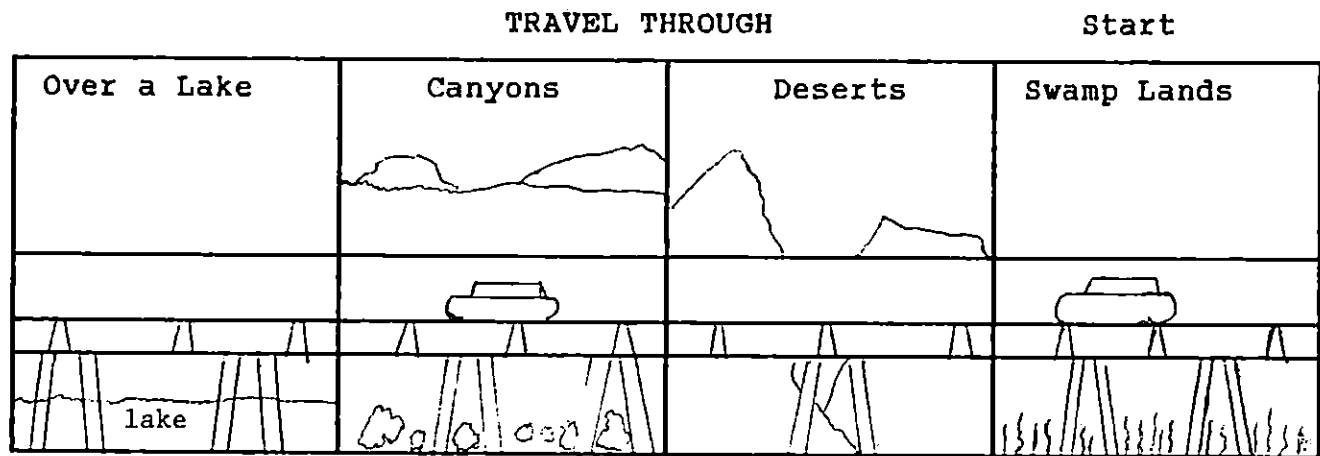

experimentation is needed with tunnels that can open and close. Like with other forms of transportation such as, the car, the airplane, the train, -- the tunnel car must be allowed to evolve and develop. Today's automobiles, airplanes and trains are far different than when the inventor first had the idea. In countries like Canada where harsh weather is a fact of life, traveling through plastic tunnels that provide a transportation system which is impervious to the weather is a necessity.

THE TUNNEL CAR RIDE AT THE FUN PARK

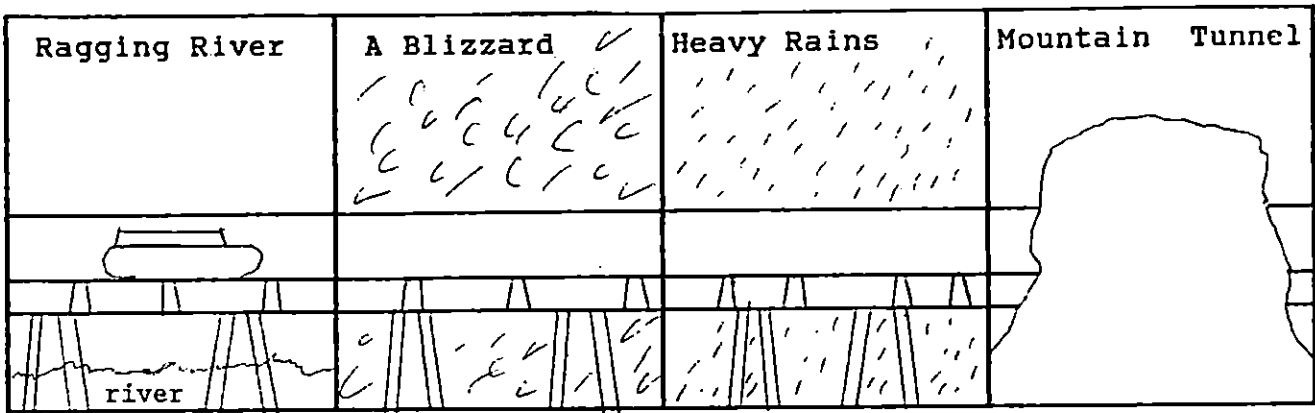

The tunnel car ride starts at the Tunnel Car Station. At the Tunnel Car Station a complete explanation of the tunnel car system is presented. When riding the tunnel car around the Park you will pass through different scenes which represent weather conditions, landscapes and types of terrain a tunnel car system might pass through. Such as, over a lake, through a city, over a forest, under snow, through deserts, etc..

THE TUNNEL CAR STATION

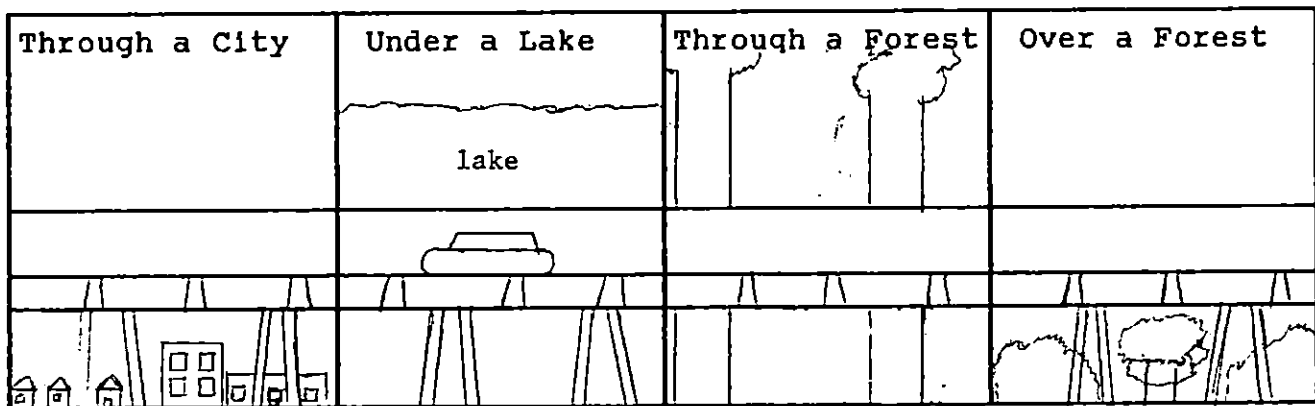

The route the tunnel car takes through the Park is shown below.

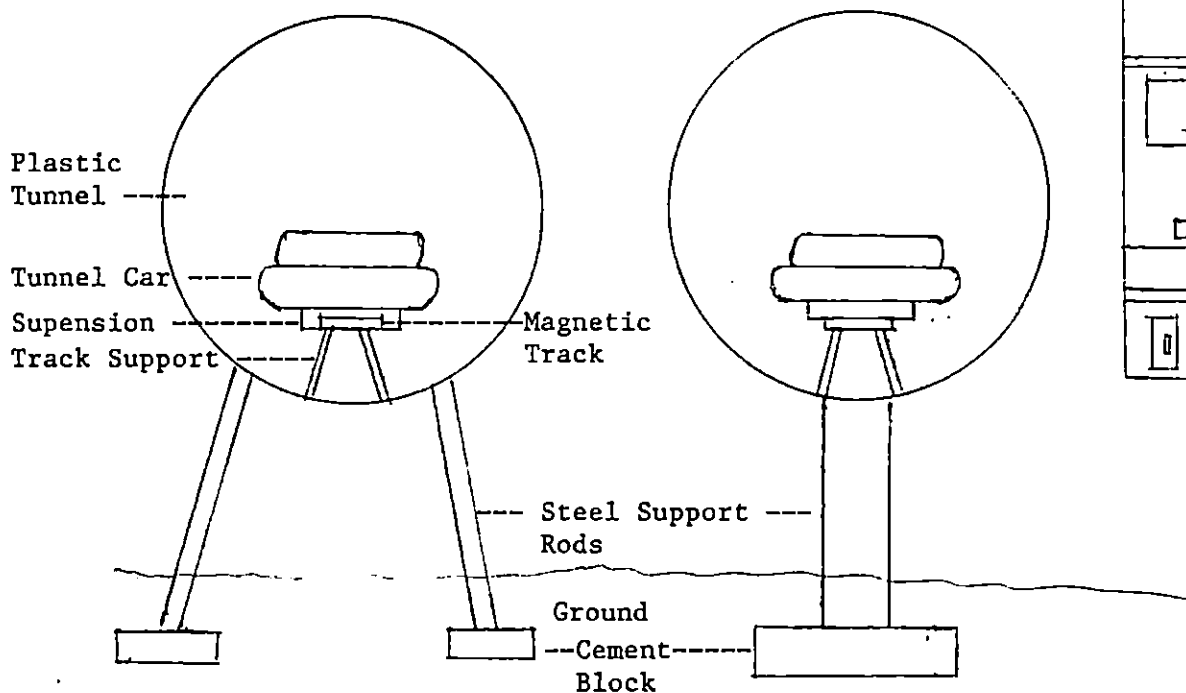

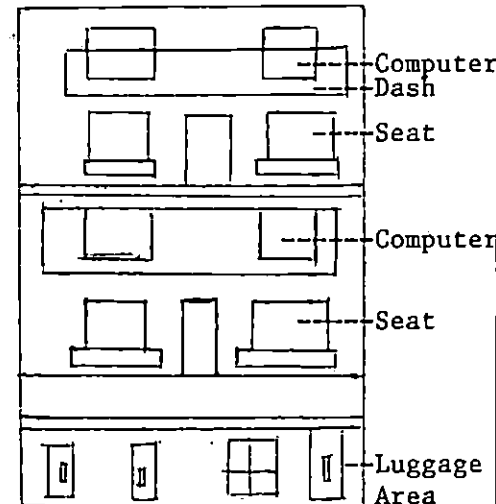

Continue

Continue

TUNNEL CAR

OPEN TUNNEL

SPACE SHUTTLE RIDE

The Space Shuttle Ride, which holds two passengers, points skyward. The passengers sit with their backs to the ground and feet pointing towards the sky. Pressing the button launches the space shuttle. A huge weight is mechanically dropped from above and by way of a pulley, the shuttle is hurled to the top. The effect of the G-force is accomplished as gravity is overcome in the launch. Once at the top, the shuttle starts downhill. As speed picks up, the shuttle is hurled through curves, over the death-defying leap and into the barrels, through the barrels and into the corkscrew where the shuttle goes around and around working its way down to the final approach, where the shuttle rolls down a huge slide to the end of the ride.

CONCERT HALL

Every Saturday night and Sunday afternoon concerts are given. The Saturday night concert is aired on National Television and features the nations most outstanding talent. The Sunday concert is given for local people and features less known talent.

STARSHIP TOUR

The mammoth Starship is located towards the rear of the Park inbetween the Concert Hall and the Planetarium. The first thing you notice is that it is big. As big as a 5 story building. The tour consists of 5 seperate decks. Each deck is made up of various rooms. Each room serves a function when traveling in space. The Starship is part of the Story that is told in the Planetarium.

THE PLANETARIUM STORY IS NEXT

If you are interested in OUTER SPACE, in the universe and how man came to be, then you owe it to yourself to read the story that follows in the Planetarium. Be prepared to travel beyond space and time all the way back to the beginning of creation and learn how it actually happened. And be prepared for a suprise ending that will astound you.

T H E P L A N E T A R I U M

In a Planetarium an optical device projects images of celestial bodies on a dome. Light passing through the optical device projects images on the dome ceiling and walls, of Galaxies, Suns, Planets, Comets, Asteroids and other celestial bodies, and phenomenon that make up a universe. The auditorium is pitch dark. When the optical device is turned on, the walls and ceiling are filled with celestial bodies. The audience gets the feeling of sitting in space looking at the universe. The Griffith Park Observatory in Los Angeles, California has a planetarium where a show is given to explain about the universe.

In this Planetarium, the story of God, Man, the Universe and Creation are told. As set forth in "The Book of God's Workers". This is a true story. The story tells about God's Workers, who have come to our planet to end Wars, Poverty and Human Suffering. This is not a religious story, nor is it in any way connected with religion. God's Workers are presently stationed above the earth observing human events. They have sent this information down to earth so that mankind will know of their presence.

During the story a SPEAKER narrates. His voice is on a cassette tape. A VISUAL movie is shown through the optical device. When the speaker talks, the word SPEAKER: appears. When the word VISUAL: appears the paragraph below tells what is being shown in the movie. Throughout the story following the word VISUAL: it will say, "Return to the Universe. This means we are returned to the optical device projecting images of celestial bodies on the dome walls and ceiling.

THE SHOW BEGINS: The auditorium is dark.

VISUAL:

Shown on the dome ceiling. THE STORY OF CREATION *** As told by God's Workers ***

The auditorium is dark again.

SPEAKER:

In the beginning there was God. And only God.
God desired to create infinite and abounding life--not merely one universe, or even one million universes--but infinite, boundless universes with abundant and bountiful life.

VISUAL:

The optical device is turned on. The ceiling and walls are filled with billions of Stars and Galaxies.

SPEAKER:

And God filled the heavens to capacity. All physical space was consumed as God created universe upon universe, stretching to infinity in all directions.

And God filled the life supporting planets with people, animals, insects and creatures of all kinds. He made each with unique and individual characteristics, creating a great divergence of life forms.

A MOMENTARY PAUSE BY THE SPEAKER HERE. THEN HE BEGINS SPEAKING

God intended that his creation should last an eternity, so he made specific provisions to ensure his "masterpiece" would survive. Part of God's divine plan is a "Supreme Being" whose purpose is to watch over humankind. God, in his infinite wisdom, had made man imperfect, yet provided him with the ability to evolve and to ultimately reach perfection and become a highly evolved being.

VISUAL:

Shown is man in his prehistoric beginnings. He appears to be hairy and is carrying a wooden club for protection.

SPEAKER:

Man in his early beginnings might be barbaric, cruel and insensitive towards animals and other humans in his environment. He would be almost animal-like.

VISUAL:

Shown is man evolving through the years. The Romans, the Egyptians, etc. up to the present time.

SPEAKER:

As time passed man would become educated, learn skills and even develop technology through his ability to invent, create and conceive ideas. God knew that profound human suffering would exist along the way until man became a fully evolved, loving, caring and compassionate being.

VISUAL:

Shown are scenes of wars, murder, concentration camps, KKK burning crosses, violent gangs, horrible poverty, unbearable prison conditions, etc..

SPEAKER:

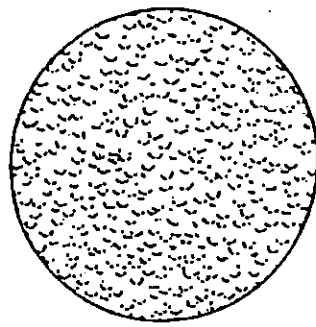

Wars, murder, greed, violence, aggression, indifference and unspeakable cruelties would abound on planets as humans learned to adapt to one another.

VISUAL:

Return to the Universe. Celestial bodies appear on the walls and ceiling as projected by the optical device.

SPEAKER:

Because man is imperfect, and the process for man to evolve is lengthy, God created a SUPREME BEING. The function of the Supreme Being is to watch over man and help him to evolve and reach his full development.

GOD'S SUPREME BEING

VISUAL:

The above picture is shown as a representation of what God's Supreme Being might look like.

SPEAKER:

God's Supreme Being is round, like a ball. On the inside it consists entirely of human brain material. It has a hard covering to protect it. Its size is enormous, larger than an entire galaxy.

VISUAL:

The Supreme Being is shown in space.

SPEAKER:

God placed the Supreme Beings in space, inbetween galaxies, out of sight of humans, who had to evolve.

The Supreme Beings have no needs, such as food or water. And they are unaffected by temperature. They have the ability to live an eternity.

VISUAL:

Goes back to the representation of God's Supreme Being shown at the top of the page.

SPEAKER:

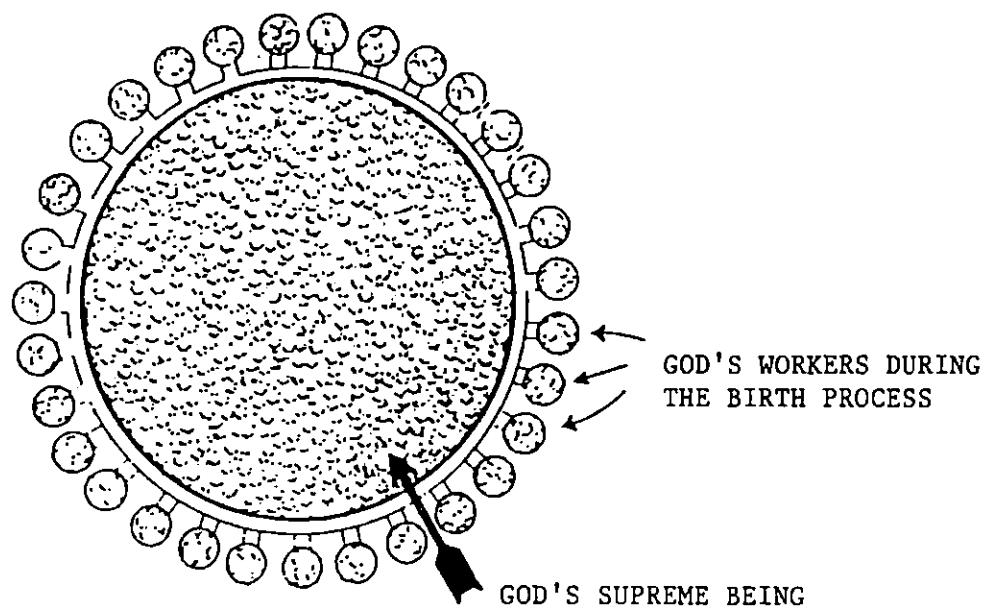

The Supreme Beings have the ability to produce off spring. Their off spring are called "God's Workers", because they carry out God's Will by overlooking planets and observing and monitoring humankind. The Supreme Being can give birth to unlimited numbers of off spring.

VISUAL:

Return to the Universe.

SPEAKER:

God's creation is vast. The number of God's Workers required to overlook the vastness of creation is staggering.

SPEAKER:

The Supreme Beings do not need a mate to reproduce. They produce off spring by growing umbilical cords which extend out from their round mass. At the end of each umbilical cord is a womb. Inside the womb birth takes place. What emerges is their off spring, which is tiny in comparison to the Supreme Being and never grows any larger. The off spring can live throughout eternity and have God-like characteristics and abilities. In the representation above the size of the off spring encircling the Supreme Being are larger then they actually are. The off spring are minute in comparison. While the Supreme Being is larger than an entire galaxy, the off spring are not much bigger then a 4 story building.

God's Supreme Beings have the ability to store infinite knowledge. They are infinite storehouses for knowledge, wisdom and information. The Supreme Being is where all the knowledge, of all the universes, through all the ages, will reside. It is the storehouse for all the knowledge accumulated, by all the beings, in all the universes, since the beginning of the beginning. There is no limitation to the amount of information the Supreme Being can store. The kind of information that is gathered by God's Workers, and then stored by the Supreme Being, is knowledge that is useful for the development of man. This would include all inventions, ideas, concepts, creations, equations, formulas, solutions to problems, that man has ever conceived. All the knowledge relating to the development of man, on every planet, in every galaxy of every universe, has been gathered and stored in the infinite storehouse, the Supreme Beings.

VISUAL: Return to the universe.

SPEAKER:

In the beginning God's Supreme Beings were empty of knowledge and wisdom. As man developed and evolved on planets, God's Workers began the knowledge gathering process. By observing humans on planets, and by being born on planets and living one lifetime as a human being, God's Workers were able to assist humans in their development and gather information about them at the same time. The information gathered was then passed on to the Supreme Being to be stored.

VISUAL: Shown is a human and several different types of aliens from different planets. Waves of energy are shown moving between their brains.

SPEAKER: God gave human subconscious minds the ability to communicate with each other. Although unknown to us humans, God gave our subconscious minds the ability to communicate with one another. This would provide man with access to information beyond his own planet.

VISUAL: Shown is a diagram of the human brain. The conscious mind and the subconscious mind are indicated. The conscious mind consists of approximately 12% of the human brain and the subconscious mind consists of approximately 88% of the brain.

SPEAKER: Because of the division of the human mind, the conscious and the subconscious, our subconscious mind is able to conceal this ability which it has.

VISUAL: Return to the universe.

SPEAKER: Our subconscious minds act independently without our knowledge and carry on a communication which spans the universe, passing information to each other and storing it. This ability of subconscious minds to communicate across the vastness of space is an important part of the knowledge harvesting process which God's Workers must undertake. When human subconscious minds communicate with each other by passing information, God's Workers can interact in the process and gain access to this information. God's Workers can also communicate directly with human subconscious minds and gain knowledge or information from them.

VISUAL: Shown are God's Workers stationed above a planet. They are represented by hundreds of glowing incandescent forms of visible radiant energy.

Waves of energy are shown coming off the planet. This represents a mass of information coming up from the planet below. It illustrates how human subconscious minds below are able to communicate with God's Workers.

SPEAKER: God's Workers have the ability to hover above planets unobserved. They gain knowledge of events below with the help of human subconscious minds.

VISUAL: Return to the universe.

SPEAKER: God, in his infinite wisdom, realized that a method of communication would have to exist whereby the human mind could communicate and interchange ideas and information. The telepathic abilities of the human mind at the subconscious level is a reality that mankind is unaware of. Our conscious mind is not aware of the incredible telepathic abilities of the subconscious. We are only aware of what exists in the conscious mind. The unconscious is beyond our reach. The telepathic abilities of the mind plays an important role in God's creation.

VISUAL: Shown is the Supreme Being in space. Energy is flowing off into the

distance towards God's Workers. This represents communication taking place between the Supreme Being and God's Workers.

SPEAKER: The Supreme Being communicates with its off spring, God's Workers, by mental telepathy.

VISUAL: God's Workers are shown communicating with one another. Energy is flowing between them.

SPEAKER: God's Workers communicate with one another by mental telepathy.

VISUAL: Energy is shown flowing between planets, solar systems and galaxies.

SPEAKER: And human subconscious minds also communicate amongst one another by mental telepathy.

VISUAL: Returned to the universe.

SPEAKER: Telepathy, or mind communication allows information to be passed over distances that no other communication system can accommodate. The term speed does not exist in telepathy. Mind communication is instantaneous. How this is accomplished is a mystery for mankind to unravel one day. If God's secret can be learned then man could communicate across any distance instantaneously. If human subconscious minds can do it, then perhaps so can man's technology.

This interconnecting communication system which links all beings, allows for the transfer of knowledge between planets without humans being consciously aware of it. God has entrusted the subconscious to impart information to man which it has stored through its communication that will lead to the advancement of human kind. Our own subconscious minds are a vast storehouse of knowledge and information, as God has planned it to be in order to assist us. Ideas slip out of the subconscious, that inspire us, encourage us, and guide us. Many times these ideas were transferred from other planets where the original inventor first conceived of it or accidentally discovered it. Through this method all beings indirectly, and unconsciously share discoveries, as incredible as it might sound. So the next time you get an idea, a notion, an inspiration or a brainstorm, stop to consider, was it your own subconscious sharing some of its stored knowledge with you.

VISUAL: Shown is an array of man's inventions, machines, scientists at work, chemists working with test tubes, farm machinery, weapons, roads and bridges, etc., as narrated by the speaker.

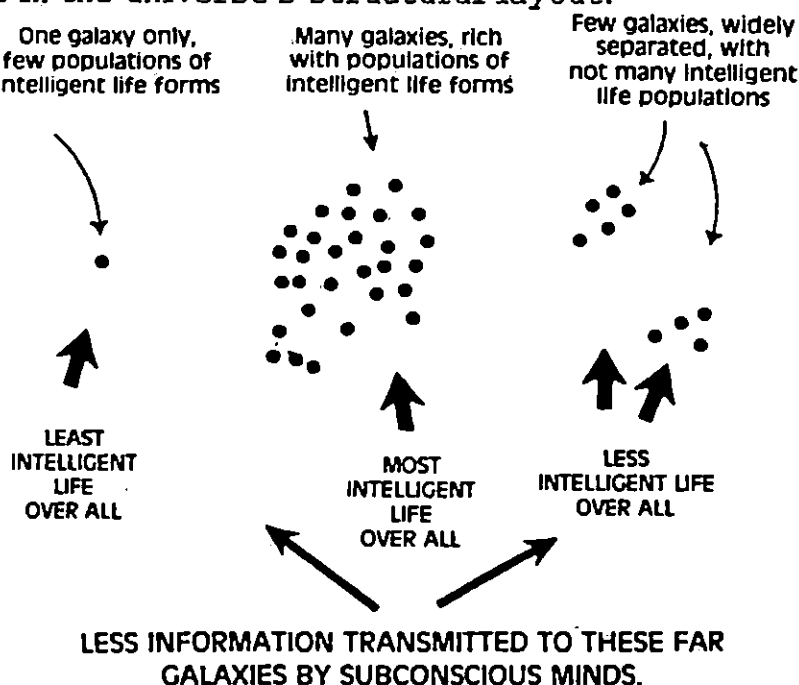

SPEAKER: Perhaps we might ask what kind of information subconscious minds share with each other. They share information that is useful for the development of mankind. They send information to other planets regarding useful inventions, ideas and discoveries on their own planet. Ideas and information are passed along. Each stores the information, then passes it to others. This passing of information from one to the other is how the information works its way through the universe. As it is passed, it is used.

Each subconscious mind decides what information it will impart to its counterpart, the conscious mind. Since the information is stored for a lifetime it can be utilized at anytime up until death. Without this communication, knowledge and ideas would be extremely limited. As man toils, builds and advances on planets throughout the galaxies, God's system for enhancing creativity through the utilization of our own subconscious mind and its ability to communicate is vital to human advancement. In every facet of human endeavor our subconscious mind plays a role in assisting us with ideas.

VISUAL: Return to the universe.

SPEAKER: In God's creation, communication amongst subconscious minds works for humanity on a very grand scale--a scale that exceeds by far the limits of our own infinitesimal world. And we are never aware of this massive communication taking place.

BRIEF PAUSE: Let us ponder for a moment the universe and its vastness, and the infinite life it contains. The universe is made up of billions of galaxies. No one knows exactly how the universe is laid out, since we have no map. Some galaxies are close together forming groups, while other galaxies may be enormous distances from any other galaxies--off by themselves, you might say. Each galaxy is made up of billions of Suns. Around each Sun revolve planets, some of which have inhabitants as the planet earth does. We will now see what determines the scientific advancement of human life on each planet of the cosmos. Take a look at the diagram below which illustrates galaxies and groups of galaxies and how they might be positioned in the universe's structural layout.

Although 10 arrows are shown on the diagram above, in the movie 1 arrow at a time is shown and the speaker says what each arrow indicates on the diagram.

VISUAL: Return to the Universe.

SPEAKER: The human inhabitants of Worlds located in galaxies that are far from other galaxies may be less intelligent than the inhabitants of Worlds located in more populated regions. Also, the number of other life forms existing in a galaxy will play a part in determining intelligence. It is apparent that the scientific advancement of any planet of beings is greatly dependent on ideas, discoveries, inventions, creations and human thought. Without an idea, there is rarely a discovery. The ability to conceive ideas leads to discovery and human advancement.

The closer a World is to other Worlds, the nearer a galaxy is to other galaxies that contain intelligent beings, the more transmitted information human subconscious minds will be receiving. Because human subconscious minds of other Worlds tend to communicate more often with minds that are within the same cosmic "proximity". In galaxies that are scantily inhabited with intelligent life forms, there are fewer exchanges among subconscious minds. And where communication is greatest, so is intelligence. The most intelligent life forms will be found in areas where human subconscious minds can conduct an intercourse of ideas among themselves on a regular basis, and these are the areas in which human subconscious minds interact and form mutually beneficial knowledge pools.

VISUAL: Shown is the face of a man and a woman.

SPEAKER: Our own subconscious mind has a wealth of information stored within it. The amount of information it is willing to share with us, the conscious mind, is comparatively little. It only discloses whatever information it pleases. Some information it does not wish to share is the fact that it communicates with other subconscious minds in the universe, collecting information and storing it. It may be difficult to comprehend the concept that subconscious minds are totally independent of us and can communicate across the vastness of space.

VISUAL: The horizon of the ocean is shown which looks flat.

SPEAKER: Not so very long ago, the idea of our planet being round (and not flat) sounded crazy to most people, but who believes the World is flat today. If you are open-minded enough to accept the possibility of subconscious minds communicating with each other, then you are ready to accept the future.

VISUAL: Return to the Universe.

SPEAKER: In God's creation there are many new and unusual concepts that mankind has never conceived of before.

3 MINUTE BREAK HERE: The lights go on and it is announced that a 3 minute stretch is now taken.

THE SHOW RESUMES

VISUAL: Return to the Universe.

SPEAKER: Let us now review what we have learned so far.

In the beginning God created infinite universes and filled the life supporting planets with humans and creatures of all kinds. This is not a religious God, nor is God connected with religion in any way. Because man is imperfect God created a Supreme Being to look after man. The Supreme Beings give birth to off spring called, God's Workers, who carry out God's Will by overlooking planets and assisting humankind.

In God's creation a system of communication exists, that is unknown to mankind, whereby information and knowledge can be passed and stored and used, to benefit all existing human life. This communication system includes God's Supreme Being, God's Workers and human subconscious minds. These three entities pass and store information that is used to benefit mankind.

VISUAL: Shown is the diagram of the Supreme Being with its off spring.

SPEAKER: God gave the Supreme Being and its off spring incredible God-like powers and abilities. They can provide almost any miracle you can imagine. Such as: Move planets and Suns around like toys. Move planets and Suns to different locations. VISUAL: A planet disappears and reappears in a different location. SPEAKER: Bring human beings back from the dead. VISUAL: Three bright lights appear then fade away. A man, woman and child appear as though being returned from the dead. SPEAKER: Remove all the water from an entire planet. VISUAL: An ocean is shown, then the water disappears and the bottom of the ocean is seen. SPEAKER: Remove all the animals from an entire planet. VISUAL: Animals are seen disappearing. VISUAL: Returns to the diagram of the Supreme Being with its off spring.

SPEAKER: God's Workers use their powers to repair planets that have been damaged through man's carelessness, such as the Ionosphere and Greenhouse Effect here on earth, they provide proof of their existence through miracles, and they heal the sick as Jesus Christ did. Later on in the story you will learn more about the incredible powers of God's Workers. Now lets see how the Supreme Being utilizes its stored knowledge.

VISUAL: In the diagram of the Supreme Being it shows the wombs breaking open and the tiny round off spring being born.

SPEAKER:

The Supreme Being gives birth to infinite numbers of off spring which will overlook creation, as is God's Will. Creation is continually expanding and growing larger as will soon be explained. Therefore the Supreme Beings must continually produce off spring. It is a never ending job. The knowledge that is stored in the Supreme Being is a storehouse of information. God's Workers can access this information through mind communication or telepathy. Just as our subconscious mind acts as a storage container for us, which we can access when we need to, the Supreme Being is the storage container for God's Workers. It contains infinite knowledge, wisdom and usable information. This wealth of information helps God's Workers to do their job.

VISUAL: Shown is God's Workers stationed above a planet. Waves of energy are used to show that they are communicating with each other, and communicating with human subconscious minds on the planet. The Supreme Being is shown in the distant background with waves of energy showing communication with the Supreme Being.

SPEAKER: God's Workers can hover above a planet and through mental telepathy, communicate with each other, communicate with the Supreme Being, and communicate with human subconscious minds on the planet. Can you see the system of knowledge sharing and knowledge storing that exists in God's creation.

VISUAL: Shown is the face of a man and a woman.

SPEAKER: In God's system our conscious mind represents us, our consciousness. Our "subconscious mind" which is beyond our reach and understanding, God utilizes for his own purposes, to assist man in his development and help him evolve.

VISUAL: Return to the Universe.

SPEAKER: Let us ponder the universe and its abundance of life. How important is knowledge to humanity throughout creation? Knowledge is the commodity that determines intelligence. It determines the advancement of human civilizations on every planet.

VISUAL: A spacecraft is seen traveling in space. It enters the earth's atmosphere and lands on earth.

SPEAKER: What if a spacecraft landed on earth today and an alien stepped out and said on National Television. (The alien speaks) I have come to your planet to help you. I have superior knowledge to offer your world. Why grow food or kill living beings to eat? With my knowledge you can manufacture supernutrient food crackers. One cracker is an entire meal for 30 days, and by eating it you will be healthier and feel better than you ever have. Forget about death. With my knowledge you can live as long as you wish. Airplanes, cars, boats, trains... forget about them. I will show you how to build your own personal teleporter so you can transport yourself wherever you wish to go in an instant. You want space travel and to visit other galaxies? I will show you how to travel on light beams across the limitless expanses of the universe. My knowledge will bring you things that will astound you, a whole new way of life for your entire planet. Robots will do all the work and toil. All you have to do is enjoy these new miracles my knowledge will bring you. (Alien stops talking), Speaker talks: As you can see, knowledge is important to human advancement. Knowledge is the difference between the caveman and modern man. Our life is filled with marvels a caveman could never have understood.

VISUAL: Return to the Universe.

SPEAKER: God's creation is more incredible than you can imagine. Now let us return to the beginning of creation.

In the beginning there was God. And only God. What God is, or might be of, is unknown to God's Workers. In God's infinite wisdom he fathered creation.

God desired to create infinite and abounding life, not merely one universe, or even one million universes, but the convergence of infinite, boundless universes with abundant and bountiful life. God's creation reveals infinite universes, stretching without end, as will be shown.

God's plan for creation is so immense that all physical space could not contain it. It is a plan that continually expands without end. God devised a method through which creation could continually expand into infinity, and in doing so, allowing unlimited physical space for his creation. Through God's method, creation without end is obtainable. No limits or restrictions can hamper its size or vastness. God's creation is truly an entity without end, in which an infinity of universes can exist. God had solved the problem of a lack of physical space to contain his creation.

In the beginning God created the Genesis or beginning universes from which an infinity of other universes would be spawned. The Genesis Universes would produce the infinity of life God desired to create. In each Genesis Universe, other universes would come into being, that would stretch to infinity, as will be explained.

God filled the heavens to capacity with Genesis Universes. All physical space had been consumed as God created universe upon universe, stretching to infinity in all directions. And God filled the life supporting planets of the Genesis Universes with people, animals, insects and creatures of all kinds. He made each with unique and individual characteristics, creating a great divergence of life forms, envisioning that these traits would then be passed down to other universes that would be spawned, where infinite life in variety could abound.

We will now see how it is possible for creation to continually expand into infinity. God wanted his creation to go beyond the boundaries of physical space. To have unlimited capacity for the continuation of infinite and bountiful life. God's plan allows for creation without end. A never ending, continually expanding system that truly has the characteristics of the term "infinity".

The Genesis or beginning universes were created by God in order to begin the process of life. Thereafter, in each Genesis Universe, through God's plan, an infinity of other universes would be spawned. These universes would expand into the unlimited capacity of infinity, where boundless, limitless life would exist. An infinity of life would be achieved, as God desired.

VISUAL: A planet is shown from a distance in space. The camera moves towards the planet, then onto the surface of the planet. Futuristic cities are seen. Advanced technology and vehicles of the future are shown.

SPEAKER: Man's ability to advance in scientific and technological achievement is unlimited. God created man and gave him the ability to accomplish great scientific achievements. God had a specific purpose in mind when he endowed man with the mental intelligence for scientific advancement. Humankind would become the infinite Army of workers who would continue creation beyond the boundaries of physical space.

VISUAL: Shown on the dome ceiling. "The Story of Man".

VISUAL: Return to the Universe.

SPEAKER: And God filled the life supporting planets of the Genesis Universes with people, animals, insects and creatures of all kinds. This was the beginning of man. God did not fill every planet with races of people. He allowed genetics to shape the diversity of man.

VISUAL: A man and a woman are shown in the Garden of Eden.

SPEAKER: God created one man and one woman for each life supporting planet, who would, through the process of birth, spawn an entire race. 2 would become 8, 8 would become 32, 32 would become 76, and so it would go until multitudes walked the planet. This occurred on every planet that could support human life.

VISUAL: Shown is man and woman advancing and learning. Fire, a club, the wheel. **SPEAKER:** As time passed human life evolved and developed on planets throughout the Geneses Universes. Generation after generation man advanced and learned.

VISUAL: Shown are God's Workers above a planet. They are represented by bright rectangular light objects. **SPEAKER:** God's Workers were there to assist humans in their development.

VISUAL: A primitive man is shown making sparks with a rock to light a fire. Then it shows the same scene on another planet with a different primitive man wearing different clothing. Then the same scene is shown on a third planet with a different man in a different outdoor setting. **SPEAKER:** Human subconscious minds transferred knowledge and ideas from planet to planet.

VISUAL: Shows man advancing. The wheel, guns, the wagon, the train, modern cities, modern tract homes, the airplane, the automobile, governments and court systems. **SPEAKER:** Man advanced through his ability to invent and create. Technology came into being. Modern cities were built. Governments and laws were established.

VISUAL: God's Workers are shown above a planet. Waves of energy are shown representing communication between God's Workers, The Supreme Being and human subconscious minds down on the planet. **SPEAKER:** As man advanced and

developed, this information was gathered by God's Workers and then stored and warehoused by God's Supreme Beings. Man's ideas, discoveries, inventions, concepts, systems, solutions for problems, etc., had all been stored.

VISUAL: Shows cities in space. A fleet of Starships is seen. A room is shown with charts and maps of the universe. **SPEAKER:** As time passed man learned the secrets of the universe. He learned how to travel through space quickly. He charted and mapped his universe.

VISUAL: Shown is the bridge of a Starship. A highly advanced X-Ray radar device is shown that can display a picture of the inside of a planet or a Sun. Another device gives the read-out of the metals contained in the planet. Other elements such as wood, water, atmosphere make-up, etc. are displayed. The entire make-up of the planet is then displayed right down to the basic molecules and types of atoms.

The next scene shows a laser device on a platform above a planet. The device is turned on and the laser device cuts the planet in half. The two halves of the planet are then separated, and the planet is examined in cross section to discover its make-up. **SPEAKER:** Man even learned how planets are made and how Suns are formed.

VISUAL: Shown is a man with a large head. He is sitting in a room with highly advanced technological equipment. Many different planets are seen on television screens. **SPEAKER:** Man became a super-intelligent being who had unraveled all the mysteries of his universe. In fact he became so intelligent that there were no more mysteries left to solve.

VISUAL: Return to the Universe.

SPEAKER: God was pleased. And God spoke to man, communicating with him through his subconscious mind. Man became consciously aware of God's message. Mankind would become the Army of workers who would continue creation beyond the boundaries of physical space. God told man to build Miniature Universes. And to build them in abundance. Man was directed by God to build miniature planets and Suns. He instructed man to, plan, design and build, miniature Solar Systems, miniature Galaxies and miniature Universes. God's Workers would assist man in this endeavor by providing him with knowledge and ideas through his subconscious mind. On trillions of planets the task began.

VISUAL: Shown are highly advanced machines that have the capabilities of manufacturing tiny planets and Suns. A room is filled with tiny planets and Suns that are hanging in mid air. They are held in place by a magnetic gravitational force field.

SPEAKER: Man devised highly technological machines that could manufacture tiny planets and Suns. These highly sophisticated machines turned out planets by the billions. Every type of planet imaginable. And Suns by the millions.

VISUAL: Shown are men working in space placing tiny Suns and planets in orbit. They are using gravity devices to move and place them. A piece of equipment is shown that starts planets orbiting around the tiny Sun. A digital read-out displays information relating to the planets orbit, distance from the Sun, distance from other orbiting planets, speed at which it will travel in orbit, the axis tilt required to produce the seasons, such as Summer, Winter, Spring and Fall. The planets rotation is displayed which produces day and night, the amount of radiation heat the planet is receiving from the Sun is also displayed. These measurements and techniques constitute the exact science of Solar System designing. The engineering of the future that beings who are lightyears ahead of us might undertake.

SPEAKER: Man learned by trial and error how to construct a workable Solar System. In every galaxy of the Genesis Universes humans were busy building tiny planets and Suns. Creating innovative miniature Solar Systems.

VISUAL: A. Shown are hatcheries for tiny humans. B. Doctors are in an operating room working on a pregnant woman. C. Scientists of Genetics are working with test tubes. D. Animals are in cages for Genetic experimentation.

SPEAKER: It came to pass that tiny people, tiny animals and other tiny creatures had to be engendered so that life would exist on the tiny planets. Doctors and scientists of Genetics began experimentation. Many approaches were tried. Some tried hatcheries and artificial wombs. Others tried to trick nature by using various methods, like removing the fetus from the womb of a pregnant woman and attaching in its place numerous small artificial wombs. By using advanced drugs and medicines the mother's body could be fooled by the presence of the small wombs, and would feed and form the small fetuses. The result would be miniature people who would become the Adams and Eves of planets in a miniature universe. All they would have to do is to find a way to give birth to one tiny man and one tiny woman. From these two and the process of birth, millions of tiny people could be spawned who would produce races of other millions and the planets of the miniature universe would soon be full of humans. The process would then be extended to animals and other creatures. Man toiled for centuries, trying this and trying that, until finally he developed the knowledge, skills and technology he needed to produce the Miniature Universes that God instructed him to build.

VISUAL: Return to the Universe.

SPEAKER: What would evolve from these miniature universes. Why did God want them built? To find the answer to this question we must go back to the beginning of creation.

And God filled the life supporting planets of the Genesis Universes with people, animals, insects and creatures of all kinds. He made each with unique and individual characteristics, creating a great divergence of life forms, envisioning that these traits would then be passed down to the "miniature universes" where life in variety could abound.

The Genesis Universes would produce the infinity of life God desired to create. In each Genesis Universe, "miniature universes" would extend into infinity.

God's plan for creation is so vast that all physical space could not contain it. It is a plan that continually expands without end. As miniature universes extend down into infinity, they become so minute that an entire miniature universe could be contained within a single atom, and thus, the concept of "a lack of physical space" does not apply within the small realm of infinity.

VISUAL: Shown is a group of men working in space. They have miniature planets and Suns all around them.

SPEAKER: The monumental task of physically building the infinite numbers of miniature universes God assigned to humankind. The reasons here were manifold. God created the original universes and meant them to be examples from which models could be duplicated. By assigning the chore to man he allowed man's diversant and variable nature to take hold, to take his teachings and formulate their own moldings. Serious-minded humans would build miniature universes of innovation. Unique creativity would be the cornerstone of universes and this is what God desired, not universes of monotony with each one resembling the next.

Humans need a challenge. To discover the mysteries of their own universe is not enough. Their feeling of pride is intensified as they look upon their magnificent creation, their miniature universe, and say, we planned it, we designed it and we built it.

VISUAL: Return to the Universe.

SPEAKER: A thousand years has now passed since God spoke to man and told him to build miniature universes. There is now an abundance of miniature universes under construction in the Genesis Universes. Life is now beginning to develop on some of the life supporting planets of the miniature universes. An Adam and Eve, one man and one woman were placed on each planet, from which an entire human race would be spawned. Males and females of every miniature animal and miniature creature were put on each planet to spawn a race of their own. Life was growing in the oceans, on the land and in the air. The humans of the Genesis Universes watched over their miniature planets, like God's in the sky, assuring that all went well. If the Adam or Eve didn't survive then they were replaced with another. Evolution had to occur. The land had to shift about as continents moved across continental plates or shelves, pushing up mountains, creating lakes, rivers and deserts. Landscape had to be molded by erosion. The life supporting systems of the planets had to function properly. Gravity, wind, the changing seasons, the proper rotation of the planets creating day and night. Moons had to work properly. Oceans had to function with wind and waves. The same meticulousness that was used to build the planets was employed to assist in their development. Perhaps some of the animals on the miniature planets were extra-large because that was the smallest they could make. Large birds, saber-tooth tigers, dinosaurs, giant fish, etc.. Gravity and time has a way of bringing everything into shape and size. Adam and Eve might have been 25 feet tall.

VISUAL: The Planetarium is dark. (next scene) We are in the bridge of a Starship moving through space. A warning is seen ahead in space. It says:

W A R N I N G

You are entering the perimeter of a Miniature Universe.

Do not proceed further.

Force shields will prevent your entry.

Turn back now.

We then proceed past the warning. Another warning is seen ahead. It says:

W A R N I N G

You are now entering the boundaries of a Miniature Universe.

Proceed ahead slowly.

To receive historical data activate your ships computer.

A COMPUTER IS SHOWN. A voice reads what is on the computer screen.

You are entering the "Ratton" miniature universe, named after Dr. Henry Ratton, who discovered the Genetic Process through which miniaturization of humans, animals and other creatures can be accomplished. Construction began on this universe in the millennium star date 8680, by Commandment of the All-Mighty God, whose omnipresence was experienced by all humanity in all known universes.

The complete project took a billion, four hundred million years to complete. The miniature universe contains over 60 billion galaxies, 342 trillion solar systems, and 397 quadrillion planets. This project is the undertaking of the hard working and persevering inhabitants from over ten million planets located in the galaxy "Fintox" which you are now in. To enter the miniature universe is prohibited. You are reaching the point of safe return. Do not attempt to proceed past the warning shields.

The miniature universe comes into view from the bridge of the Starship. The camera stops and holds on the miniature universe in the distance.

SPEAKER: As more time passes life evolves and develops on planets throughout the miniature universes. Generation after generation man advances and learns. He becomes educated, learns skills and develops technology through his ability to invent and create. He builds modern cities and establishes governments and laws. Human subconscious minds transfer knowledge and ideas from planet to planet, as God gave them the ability to do. God's Workers were there, to assist them and watch over them. God's Workers gathered information about their scientific and cultural advancement and passed it on the God's Supreme Being who stored and warehoused it. Old inventions, concepts, ideas, systems and information that had been previously gathered and store were not acquired. Only what was new was added to the stockpile of information contained in the Supreme Being.

As more time passed in the miniature universe man evolved further and learned the secrets of his universe. He discovered how to travel through space quickly. He charted and mapped his universe. He even discovered how planets are made and Suns are formed. He became a super-intelligent being who had unraveled all the mysteries of his universe. And now that he had acquired and learned all, he was ready to carry out God's Will and begin the construction of miniature universes. The miniature inhabitants of a

miniature universe take up the task of building a micro-miniature universe. And one day, just as they have begun to build their micro-miniature universe, they are certain that the micro-miniature inhabitants of their creation will one day begin construction on their own ultra-micro-miniature universe. They may even, in the building of their universe, leave the future inhabitants as many clues as possible as to how to do it.

VISUAL: Shown are birds flying in the air.

SPEAKER: After all, didn't our creator put birds here, millions of them, to show us that air is not just to breathe, that we can fly in it. And didn't man strive to fly like a bird? Without birds on our planet to show us, we might never have realized that we could achieve flight. VISUAL: An airplane is shown flying in the air. SPEAKER: We even copied the birds and put wings on our airplanes. Now if you can fly in the air, it stands to reason that you can eventually fly into outer space. VISUAL: A space shuttle is shown flying in space. SPEAKER: And when you do, you are on your way to discovering new horizons. So our creator left us a clue: birds. And incase we are dunces, we were provided with millions of birds so they won't be overlooked.

VISUAL: We are now returned to the Starship resting at the edge of the miniature universe. The Starship proceeds forward, moving slowly. It enters the miniature universe. As it journeys through the miniature universe it passes by planets, Suns, solar systems and galaxies. As it travels the Speaker narrates.

SPEAKER: How many miniature universes are there? God's plan provides for infinite miniature universes. Imagine the inhabitants of each miniature universe building a miniature universe of their own. The result would be a chain of miniature universes which get progressively smaller and smaller. And smaller and smaller the universes go, by the millions, to infinity. Time is the major factor, the variable by which all things are made possible. It takes time to build a universe, time for life to develop, time for intelligent life to conquer the environment, time for developed beings to uncover the mysteries of the universe and to ultimately build a small-scale universe of their own. So if they could look upon their miniature universe after sufficient time had passed they could say, there stands not only one universe, but perhaps thousands and mabe millions of universes spanning their way smaller and smaller as they go. Endless forms of life have been created because of their work in building it.

VISUAL: The Starship traveling through the miniature universe is now entering a tiny micro-miniature universe which is under construction. The people working on the miniature universe look normal size when seen from the Starship. Then the camera moves out of the Starship bridge into space and it is incredible how tiny they really are when compared to the size of the Starship.

SPEAKER: Think of the construction of miniature universes as advanced technology which mankind here on earth will one day undertake. It is our destiny to continue the chain of miniature universes, of which we are a part, that began in the Genesis Universes, by the Commandment of the

Almighty God. What sounds impossible today is tomorrows reality. Even miniature planets and people. But first we must conquer space and chart the galaxies. Perhaps then we will be ready to build miniature universes.

VISUAL: Return to the Universe.

SPEAKER: If while living in our own universe, we can comprehend the idea, that from our point of view, universes span smaller and universes span larger. Our planet, solar system and galaxy are part of an infinite and ever expanding system of man-made miniature universes, as God has planned it to be, and all this immensity functions under the watchful eye of God's Supreme Being, through the tireless efforts of God's Workers. This principle is the framework of God's Plan for Creation.

VISUAL: We are above the earth. Then the scene changes to an old telephone switchboard room where operators are routing telephone calls.

SPEAKER: An example of advanced technology that was never foreseen or even imagined, reminds me of a television commercial a few years ago where the announcer says. Ten years ago no one ever heard of Fibre Optics, and today it's a reality. Eight million telephone conversations going across one wire with a diameter smaller than that of a human hair. Hard to believe isn't it? Alexander Gram Bell, the inventor of the telephone could never have imagined such technology.

VISUAL: The earth is shown in space.

SPEAKER: Man's ability to create, invent and discover new scientific horizons is unlimited, as God meant it to be. Building miniature universes only sounds hard. Advanced civilizations who are lightyears ahead of us in technology and scientific achievement will tell you there is really nothing to it once you get the hang of it. Isn't that what we would tell the inhabitants of earth who lived here one thousand years ago about our technology and scientific achievement. It only seems impossible when you don't know how to do it or are not advanced enough to understand it.

VISUAL: Shown are scenes of a man from the year 1000 A.D.. As the Speaker talks the man from 1000 A.D. is witnessing such things as, a television, a computer, a jet airplane, satellites orbiting the earth, an automobile, a nuclear explosion, a telephone, and a space probe near Jupiter.

SPEAKER: How would a man from the year 1000 A.D. react to such things as: a television, a computer, a telephone, satellites that orbit the earth and send back pictures and information, jet airplanes, automobiles, nuclear energy, the concept of our space probes sending back pictures from space of planets, moons, asteroids, comets,--astronauts visiting the moon, a space walk. Even something as simple as a cassette player, which records the human voice and plays it back would seem fantastic and stupefying to the primitive man of 1000 A.D., yet these are every day occurrences that are part of our life. To the man of 1000 A.D. we would seem as Gods who can perform miracles because of our advanced technology. And to us, the concept of building a miniature universe is beyond our comprehension. Yet

it is a reality that mankind must encounter one day, as God has Willed it to be.

VISUAL: Astronauts are seen boarding a spaceship. Then traveling into space. They journey past planets and through galaxies. They leave this universe and pass into other universes where planets are enormous in size. As they pass through universes planets get bigger and bigger. Then finally they gain sight of God's Supreme Being. In the next scene they are back home on earth.

SPEAKER: We will now take a trip beyond time and space. If astronauts departed in a spacecraft today, leaving the earth and traveling in a straight line direction, eventually they would reach the end of this man made universe. Since man builds his miniature universes in space, when their spacecraft reached the end of this universe it would pass into a larger universe. The universe of those who built this universe. Distances would become enormous and planets gigantic. But if they kept on going in one direction they would eventually reach the end of that universe also. Then they would enter a gigantic universe. Themselves and their spacecraft would be only a speck in this universe. If they could continue on through infinity and eternity, they would eventually reach the Genesis Universe that spawned this chain of universes and they might even get a look at God's Supreme Being, who would have the power to return them and their spacecraft to their original planet and universe as a reward for their journey. Although all physical space is vast, there is no amount of physical space that can contain infinities of universes. Think of the size of one universe and the amount of physical space that it would require to contain it. To build or create infinities of universes would require so much space, that, that much space could not exist. So God has devised his plan for creation which allows the physical space for one universe to be ample for the construction of infinite numbers of universes. They simply span down into the infinity of smallness, getting smaller and smaller as they go.

VISUAL: Shown on the ceiling are all nine planets of our solar system.

SPEAKER: Now let's take a look at how our own solar system may have came into existence. PLANET SELECTION: The builder selected a medium to small size Sun and nine planets to orbit it. Let's examine the builders choice of planets and see how creative they were. As we look at each planet of our solar system and thoroughly examine it, consider if these would be your choices if you had thousands of different planets to chose from. The planets of our solar system are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune and Pluto.

VISUAL: Shown is a man of the future in a complex computer room with 50 tiny television screens before him and each screen has a different type of planet on it. On the walls of the room are maps of solar systems and galaxies. It is obvious that this room is for planning the layouts of solar systems. In glass enclosures about the room are tiny humans, tiny animals and tiny creatures with a sign above each enclosure saying "Samples".

SPEAKER: Let's pretend it's twenty five million years from now. You are an architect and designer of solar systems. You also have a Science and Engineering degree in the planetary sciences. Your boss has instructed you to design a solar system with one life supporting planet, eight supplementary planets and a medium size Sun. You examine your computer programs and diagrams that list over 6 million types of manufactured planets, 800,000 types of manufactured Suns, and layouts for over 90 million solar system arrangements. You must decide how you will design this particular solar system. You may even create something entirely new instead of using a stock solar system design. Planets, Suns, asteroids, space dust, etc. can be purchased from manufacturers on various planets in our own galaxy. It takes six years for delivery. Miniature humans, animals, insects and other creatures can be purchased from numerous hatcheries that are capable of producing them. Your computer programs list 13,000 species of miniature humans that have been produced through advanced Genetics. Over two billion species of animals, insects and other creatures are listed which are manufactured in numerous miniature animal hatcheries.

VISUAL: The planet Mercury is shown on a computer screen and its characteristics are listed below it. The size, gravitation field, style of planet, heat tolerance, atmosphere make-up, manufacturer, delivery time, and a plenitude of other information is listed.

SPEAKER: The first planet considered is Mercury. Its characteristics show that it is a gaseous planet that can withstand a great deal of heat. It will be placed closest to the Sun. You scan through other planets in your computer and come up with the planet Venus. Its characteristics are shown below it. It has beauty and can tolerate high temperatures. **VISUAL:** A planet similar to earth is shown on the computer screen. **SPEAKER:** The next choice will be more difficult. It is the life supporting planet of the solar system. If the planet is large it will accommodate vast numbers of civilizations. But this could result in many wars and much human suffering. The larger the planets size the more people it will accommodate and the more human conflicts there will be. In designing this planet you are taking into consideration God's Workers and the problems they will have, as they will visit this planet periodically as God gave them the ability to do. You know that they exist because you have a copy of their book (sold in the lobby) which has been passed down through the generations and became the catalyst for the construction of miniature universes, an industry in which you earn your living. You also have copies of the video tapes that were passed down which show documented proof of the miracles which occurred here on earth 25 million years ago, around the year 1994 when one of God's Workers came down on earth to end wars, poverty and human suffering.

VISUAL: Different size life supporting planets are shown on a computer screen.

SPEAKER: In selecting the life supporting planet, its size is an important consideration. **VISUAL:** Shown on the computer screen next are descriptions of life supporting planets. Various styles of planets are shown with their detailed lists entailing everything the planet consists of.

Maybe it is decided to start the planet off with four species of humans.

VISUAL: Twenty different types of humans are shown under a glass enclosure. An Oriental, a Caucasian, a Negro and a Mexican are chosen. They look similar but their color is different. An Adam and Eve of each type will be needed. You decide that a moon should orbit the earth that will effect the ocean tides. VISUAL: The moon is shown from the earth. SPEAKER: The moon will be visible from the earth and will give man incentive to conquer space and reach it. In order to show man that air is not just to breathe, that he can fly in it, the planet will contain flying birds and insects. Once man learns to build airplanes he will attempt to conquer space and reach the moon. Every detail in the development of man is considered in selecting the right planet. VISUAL: Mars is shown on the computer screen.

Going on to the next planet of the solar system you are intrigued by a tiny red planet, Mars. Mars is colorful and interesting. It has beautiful canyons and deserts. Travelers from earth will certainly want to stop at this place. No solar system would be complete without beauty and mystery. So Saturn with its moons and beautiful ring and Jupiter with its breathtaking colors are included. And to stretch the imagination and give man incentive to travel further out you put Neptune and Pluto at the far end of the solar system.

And this is how our solar system was built. If they can do it, so can we. As God has planned it to be.

VISUAL: Return to the Universe.

SPEAKER: How is man to learn about God's creation? Since mans early beginnings here on earth he has had no idea how or why his planet, solar system and universe came into existence. Without knowing the answers to these questions man has devised many possibilities. The scientists explanation is the big bang and that man evolved from apes. Religious peoples explanation is that God willed it into existence. No matter how intelligent a race of beings becomes, or how much knowledge they might have amassed, it is virtually impossible for them to comprehend and discover on their own the concepts contained in God's "Plan of Creation". Because of the very nature of these principles, being intangible, unseen and invisible, the only way this information could be ascertained is through God's Workers. And because it is impossible for man to learn these principles on his own, it is God's wish that the inhabitants of all the universes be informed about his plan of creation. Otherwise how is man to know to build miniature universes. In time, the inhabitants of each planet, in each galaxy of every universe will learn about God's creation. Each and every planet must be informed. The planet earth is no exception. God's Workers are now stationed above the earth to relate this information to you.

VISUAL: Return to the Universe.

SPEAKER: As we look out into the universe and ponder the enormity of its size and the life it must contain, let us also ponder the fact that this story you are now watching has been presented trillions of times, on trillions of planets. It is a story that has been seen by quadrillions of people. There is hardly a planet of beings who are not now aware of God's Plan of Creation. These principles are widely known. As humans build more

and more miniature universes, more of God's Workers must be born to overlook those universes, to help humans evolve. And each planet that man constructs and stocks with human life, those humans must ultimately learn through the efforts of God's Workers, about the principles contained in God's creation. And on how many more planets will this story be told. On infinite numbers of planets. There are three entities that have no end. Time, space and the tireless efforts of God's Workers.

VISUAL:

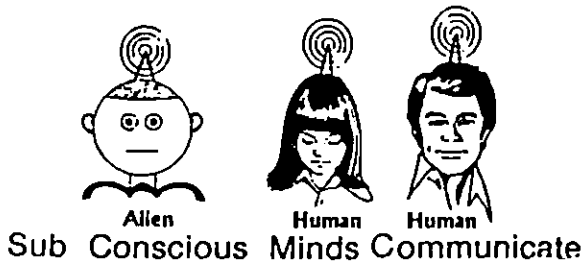

Next we will review some of the principles contained in God's creation. (Shown on the next page). Then the audience will take a 40 minute break.

40 MINUTE BREAK

The lights go on. **SPEAKER:** We will now take a 40 minute break. Refreshments are sold in the lobby. When returning please do not bring food or drinks into the Planetarium.

MINIATURE UNIVERSES WHERE AN ABUNDANCE OF LIFE IN VARIETY COULD ABOUND

RETURN TO THE PLANETARIUM

The audience returns to the auditorium and take their seats. The lights go out.

VISUAL: Shown on the dome ceiling. THE STORY OF ROBERT WOLLNER.

VISUAL: Jesus Christ is shown dying on the cross.

SPEAKER: After the death of Jesus Christ, God's Workers left our planet.

VISUAL: The earth is shown from space with God's Workers above it.

SPEAKER: God's Workers returned to earth in the late Eighteen-Hundreds, to find that in 1,900 years the inhabitants of earth had hardly advanced in technology.

VISUAL: A. horses, wagons and buggies are seen on a dirt street. B. In a log cabin a lantern is used for light and a pioneer woman is cooking with a wood stove.

SPEAKER: Horses, buggies and wagons were the major form of transportation, except for trains. Gas lanterns were used for light, and cooking and heating was mostly done with wood or coal. God's Workers decided to turn this backward human society into a highly technological society.

VISUAL: Thomas Edison is shown tinkering with an invention.

SPEAKER: God's Workers picked Thomas Edison to be the recipient of information. Check the personal writings and memoirs of Thomas Edison and you will find notations such as: "One doesn't have to think to get inspired. Ideas seem to come as though carried on the wind". The wizard on Menlo Park, as Edison was called, was no wizard at all, but instead the recipient of information and ideas which came directly from God's Workers.

VISUAL: Henry Ford is shown working on an automobile engine, Alexander Gram Bell is working with his telephone, and other inventors of that day are shown working on their invention.

SPEAKER: Edison's inventive achievements inspired others to invention and those who were not inspired by Edison, but who were capable inventors, were inspired by God's Workers.

VISUAL: Today's automobiles, telephone, airplanes and satellites are shown.

SPEAKER: This giant leap from a crude society to today's modern technology was setting the scene for the events which are now taking place and are the goals of God's Workers.

VISUAL: Humans are shown building a miniature universe.

SPEAKER: This book tells the future of mankind, when the inhabitants of earth will one day build miniature universes. It also tells about present time on earth.

VISUAL: Scenes of wars and poverty are shown.

SPEAKER: It is the intention of God's Workers to end wars, poverty and human suffering here on earth.

VISUAL: God's Workers are shown above the earth.

SPEAKER: God's Workers have been endowed, by the Almighty God, with infinite powers and abilities. Although they can perform many miracles, there is one miracle that they cannot perform. They cannot provide a miracle that will bring an end to wars, poverty and human suffering on a planet. In order to accomplish this feat, one of God's Workers must be born on the planet and live one lifetime as a human being. And during the course of that lifetime, introduce a World Peace Plan that Nations will agree to, and establish a World Government that maintains World Peace. Through this method wars are ended on a planet. In order to end worldwide poverty, which is responsible for much human suffering, Economic Principles and Methods must be introduced that can uplift the world's impoverished economies and turn them into prosperous middle class economies.

VISUAL: Shown are modern tract homes and shopping malls. The elements of a middle class lifestyle are shown.

SPEAKER: The economic principles that God's Workers introduce will provide a lifestyle that is befitting for all of humanity in the eyes of God. God despises human suffering. That is why God has devised a plan which incorporates a system where man is looked after during his development period. This is the function of God's Workers. Before they leave this planet, God's Workers will have transformed the world's economies into booming, prosperous economies, and poverty, starvation, disease and the cruel suffering which poverty imposes will be ended.

VISUAL: God's Workers are shown stationed above the earth.

SPEAKER: And now we will see how one of God's Workers was born here on earth and lives as a human being.

VISUAL: Scenes of World War 2 are shown.

SPEAKER: In 1941 World War 2 was beginning. Hitler, Mussolini and Tojo had intentions of conquering and enslaving the world. They envisioned themselves as world dictators. Hitler had laid his plans for the Master Race that would lead to the extermination of 6 million Jews in concentration camps. Japan's military forces conquered country after country in their quest for power and hunger for aggression.

VISUAL: Horrible poverty is shown.

SPEAKER: Horrible poverty existed in underdeveloped countries and other parts of the world. Human life had little value and there was little human dignity to be found.

VISUAL: God's Workers are shown above the earth.

SPEAKER: Troubled by the condition of the world, God's Workers decide that one of their own will have to be born on earth, and will live one lifetime as a human being, in an effort to end poverty and human suffering on this troubled planet. One month before the bombing of Pearl Harbor this birth took place.

VISUAL: A baby is shown in a crib in a bedroom.

SPEAKER: On November 7, 1941 in Cleveland, Ohio, Ida and Morris Wollner gave birth to a baby boy who they named Robert. Unknown to them, their new born

baby was one of God's Workers.

VISUAL: A 7 year old boy is shown playing in his room.

SPEAKER: Robert lived a normal childhood without having any understanding of who he was or what his mission here on earth was. Years later his parents separated. Him, his sister and his mother moved to Los Angeles, California.

VISUAL: The boy is older now and in High School.

SPEAKER: Robert attended Jr. High School and then High School.

VISUAL: The boy is on a ship in a Navy uniform.

SPEAKER: After High School he joined the Navy.

VISUAL: The boy looks older now and is in civilian clothes.

SPEAKER: At age 21 when he was discharged from the Navy Robert still had no idea who he really was.

SPEAKER: Then traits of the past began to emerge.

VISUAL: Robert is sitting with friends in a living room.

SPEAKER: When Robert was 22 years old, one evening he was enjoying the company of some friends. Without thinking or even knowing why he did it, he blurted out, (Robert speaks) I'm here on earth for a certain purpose, but I don't know what it is. His friends paid no attention to his outburst.

VISUAL: Robert is in painting clothes at a City Park.

SPEAKER: Robert became a self employed house painter and worked for himself. A year later, after the outburst with his friends, another episode occurred. Robert took time off from his painting work one afternoon and stopped at a local City Park to rest and enjoy the view. VISUAL: Robert's arms are stretched out in the air. SPEAKER: The wind was blowing and he stretched his arms out in the air, like airplane wings, to feel the wind blowing over them. At that moment he had the overwhelming feeling that flying was easier then walking, and that looking down on planets was more natural then being on one. He didn't understand these feelings and disregarded them.

VISUAL: The outside of an Apartment Building is shown.

SPEAKER: Two years later he would experience his first episode with God's Workers from above. Up until the age of twenty five years, Robert was pretty much the average guy, living the average life. Then something happened that changed his life and influenced his destiny up to the present time. He began receiving information transmitted to him through his subconscious mind. By telepathy or mind communication God's Workers began sending down information that would influence and direct the life of Robert Wollner.

VISUAL: The scene is inside an apartment, as described by the speaker.

SPEAKER: Going back twenty eight years ago. Robert's first encounter with transmissions from above was quite a frightening experience. It was 2:00 A.M. in the morning on a February night in 1964 at Van Nuys, California. He

had awakened from a deep sleep to get something to eat. After eating he went into the livingroom of his apartment to rest for a while before returning to bed. Then it happened! Information began to flow from his subconscious into his conscious mind, describing to him how the subconscious minds of the universe communicate with each other on a regular basis through transmitted thoughts. It dominated his thoughts, repeating itself over and over until finally he wrote it down on paper. Then it stopped completely, nothing further was revealed. Robert thought he must have entered the "Twilight Zone". Frightened by the content of the information he had received and the manner in which he had received it, he stashed his writings in the closet and then hurriedly left his apartment, uncertain if he should ever return. It was late at night and it was spooky. He decided to stay in a motel for the night. The next day he returned to his apartment, retrieved his notes and took them to the public park where he could read in the safety of a crowd. He was frightened at the prospect of being alone.

As time passed he received more information. The information was sent down in bits and pieces, with each new bit becoming a new piece to the puzzle. It has taken twenty eight years for this story to be sent down to earth. God's Workers have their own method of dispensing information. They do not reveal the secret of their existence until they are ready to do so. In order for Robert Wollner to succeed on this planet God's Workers sent down multitudes of ideas. The transmitted information didn't stop coming.

VISUAL: An office is shown with Robert sitting behind the desk writing.

SPEAKER: Over the past 28 years, Robert Wollner has received two different kinds of information. The first having a determination all its own, continually rehashed in the mind over and over until finally written down on paper, then once written down, mysteriously and instantaneously disappearing. The second kind of information received worked differently. It had to be written down on paper immediately, as it dissipated rapidly upon entering the conscious mind. This information consisted of inventions, new products, new games and concepts for new types of businesses. God's Workers had sent down multitudes of marketable inventions and ideas.

VISUAL: Shows Robert driving a car with pen and paper on the seat.

SPEAKER: For many years Robert was never without a pen and a writing pad by his side as an idea or invention could come at anytime and he wanted to always be ready. **VISUAL:** Shows Robert waking up at night and writing with the pen and paper he kept next to his bed. **SPEAKER:** Sometimes Robert would be awakened in the middle of a night's sleep and his head would be filled with ideas and illustrations.

VISUAL: Shows a file cabinet with the drawers open and full of files.

SPEAKER: Robert, in fact, had received and written down so many ideas over the years that his four-drawer metal file cabinet was filled to overflowing with unique and unusual ideas, inventions and creations.

VISUAL: Back to the office scene with Robert sitting behind the desk.

SPEAKER: Unfortunately he was never able to finance the manufacturing or marketing of any of these ideas. He seemed better at creating the ideas and inventions than marketing them. He believed himself to be the world's greatest thinker. It was God's Workers who were sending the ideas but he

had no way of knowing this, so he took credit for the inspirations. Also, he was inadequate as a worker. God's Workers didn't wish Robert to be an employed person who earns a living. They didn't want an employer to benefit with multitudes of ideas they might send Robert to help him with his job. God's Workers wanted Robert to work on their projects that would lead to the ending of wars, poverty and human suffering here on earth. Robert's efforts to find a suitable partner or investor to help him manufacture and market the multitudes of inventions and ideas God's Workers had sent him failed repeatedly, and he finally gave up trying. God's Workers quit sending the ideas since Robert was unsuccessful at marketing them, and because he already had more than any one human being could use. Had Robert found the right partner or investor to finance his ideas, he would be a billionaire today.

VISUAL: God's Workers are shown above the earth. Waves of energy are shown flowing to Robert in the office below on earth.

SPEAKER: Years later God's Workers informed Robert what the reason was behind all these innovative ideas and inventions. He was to market them, become wealthy from their success, then use the money for political purposes.

VISUAL: Robert is seen as a Mayor, then State Senator, then a Governor, then in the White House as President of the United States.

SPEAKER: God's Workers expected Robert to work his way up the political ladder. First becoming a Mayor, then a State Senator, then a Governor, then President of the United States. VISUAL: God's Workers are shown communicating with Robert as President in the White House.

SPEAKER: And as President, God's Workers would instruct and guide Robert to accomplish their goals of ending wars, by establishing a World Government, of ending poverty in the world by introducing economic principles and methods that would turn the world's economies into booming, thriving, prosperous economies, and he would end human suffering throughout the earth with the solutions that God's Workers would send down.

VISUAL: Back to the scene at the office with Robert sitting behind the desk.

SPEAKER: But God's Workers aspirations diminished because Robert was unable to market their ideas. Instead Robert lived a life of poverty and hardship and God's Workers were unable to help him. VISUAL: Shows an older Robert. He looks depressed. SPEAKER: Robert is now 50 years old with little hope of ending wars, poverty and human suffering on this planet.

VISUAL: Shows God's Workers massing above the earth.

SPEAKER: Because of Robert's continual failure, God's Workers have been massing above the earth. Originally around 200 of God's Workers came to earth. At present there are between 10,000 and 100,000 of God's Workers stationed above the earth. They are deliberating about what will be done with the planet earth, where humans cannot live in harmony, where poverty abounds, and wars are a solution for resolving differences. With so much strife on one planet it is unlikely that God's Workers will leave this planet unsuccessful. Further on in the story you will learn about the miracles and the actions that God's Workers have decided to take in order to accomplish their goals here on earth.

VISUAL: Robert is shown in the office mailing out literature. Putting things in envelopes.

SPEAKER: Robert tried to end poverty but no one listened. God's Workers had sent down a book which contained Economic Principles that can end poverty. They instructed Robert to contact the countries of the world and offer to introduce these principles into their economy. He mailed literature to the leaders of over 80 countries. Many were highly impoverished countries. Yet, not one reply did he receive. The literature consisted of an offer for Robert to go to their country at his own expense and provide an economic plan that would end poverty.

The governments of these countries, and every other country in the world are indifferent to the poverty that exists around them.

VISUAL: Urban poverty in slums is shown.

SPEAKER: Robert then decided to do something about the poverty that existed in American cities. Many cities have poverty, unemployment, slums, dilapidated housing, drugs, crime and low standards of living. These conditions cause much human suffering. VISUAL: Robert is seen in his office mailing out literature. SPEAKER: Robert corresponded with literature to the Mayors of over 80 cities, requesting to provide an economic agenda that could reduce or eliminate these conditions. Yet, not one reply did he receive. Once again, the Mayors were indifferent to the poverty that exists around them. Which is OK. Worldwide poverty is not the problem of Mayors. It is God's Workers problem.

VISUAL: Children are seen in rags walking the street begging.

SPEAKER: There are 100 million street children on earth who have no hope without the help of God's Workers. Their plight is a global tragedy.

VISUAL: God's Workers are seen stationed above the earth.

SPEAKER: What will God's Workers do to help the suffering people of the earth? God's Workers have eyes that can see all humanity. They bear witness to the pain of 100 million street children and 4 billion impoverished suffering people on earth. Because Robert failed, God's Workers will intervene with miracles. Only through these means can God's Workers achieve their goals on this planet.

SPEAKER: We will now learn about the miracles of God's Workers.

SPEAKER: Keep in mind as you watch this part of the program that God's Workers have "infinite" powers. And they regularly communicate with "God's Supreme Being", who also has infinite powers. And who knows, perhaps God's Supreme Being communicates with "God" himself, who has unimaginable powers.

VISUAL: Earth is shown from space.

SPEAKER: And now we have this tiny planet called "earth", where human beings practice the butchery of war, while the world's leaders do nothing. Poverty abounds with two-thirds of the world's population living in horrible economic conditions. 100 million children are forced to walk the streets, with no home and little food, while the rich flaunt their wealth and governments spend billions to build and develop weapons of war, which will take lives. And a thousand and one other atrocities exist amongst the ranks of humans, such as child abuse, horrible prison conditions, crime and drug

addiction cause by poverty and low standards of living, violence and unrest, and so forth. Someone might ask, why does God, the Supreme Being and God's Workers care about what happens here on earth. Why be bothered with the affairs of humans. To fully understand this we will see a short story about a man and his 5 children.

VISUAL: A man and a woman are shown in a livingroom setting with 5 children. SPEAKER: A man had five children. He earned only a moderate living. When his children became older they left home to make it on their own. Over the years the man was out of touch with his children. His business prospered and he became a millionaire. VISUAL: Shows the man in a millionaire's office. SPEAKER: Now he would go back to his children who he neglected all these years and be generous with his wealth. VISUAL: Shows him going to a big home in a rich neighborhood. SPEAKER: The first son he goes to visit has become a doctor and is quite affluent. He tells his son about his millions and that he wants to help him. The son thanks his father but says he doesn't need help, he has all the money he needs. VISUAL: The man is seen going to another big home in a middle class neighborhood. SPEAKER: The father then visits his second son who has become a successful lawyer and has made lots of money. He also tells the father that he doesn't need his help. The father then finds his other children. VISUAL: He is seen going to a slum. SPEAKER: All three of his other children are impoverished and living in a slum with their families. Because of the father's love for his children he knows he must help them. He buys them a home in a nice neighborhood, new cars, clothes and gives them money so that their needs will all be taken care of.

VISUAL: The earth is seen from space. SPEAKER: Now let me explain about God, and the Love of God. All the peoples of earth are God's children. And just as the man in the story, God loves his children. God looks down upon the earth and sees that two billion of his children are doing just fine. They have a nice home and are prosperous and happy in their middle class lifestyle. Then he looks down upon the other 4 billion of his children. He sees 100 million street children. He sees billions of his children living in horrible poverty. He sees them dying and suffering in wars. God sends his Workers forth to help his children who are in poverty and suffering.

VISUAL: God's Workers are seen above the earth in multitudes. SPEAKER: There are now between 10,000 and 100,000 of God's Workers stationed above this planet who mean business about ending poverty, wars and human suffering. Don't underestimate the seriousness of their intentions. Next you will learn about God's Love. Then we will explore the incredible miracles that God's Workers will provide for the peoples of earth.

VISUAL: Return to the Universe. SPEAKER: There is a love which exists that is so enormous that it emanates throughout all creation. It is God's love for all living things. No greater love exists. It is said that God's Supreme Beings are so filled with this love that it radiates off of them, out into space. This incredible love is passed on to God's Workers who look down on planets and experience great sorrow, grief and pain when they witness the horrors and brutality that

man inflicts upon one another. This is why God's Workers work so hard to end these atrocities on planets throughout creation. Humans on planets throughout creation who have learned about this great love, have taken up practicing its great rewards. They have learned to love. They are kind, caring and loving people. On more evolved planets the humans have built factories to manufacture synthetic food to feed all the animals on their planet. They are the keepers of their planet. Wars and brutality would not be tolerated there. The process of animal eating animal is only to continue the species until man becomes wise enough and compassionate enough to intervene. You may have seen on television wildlife programs, a Lion ripping the flesh of a living animal such as a Gazelle or Deer. Do you believe that animals don't feel. Their eyes express the fear and horror they are experiencing.

VISUAL: Jesus Christ is shown speaking to a crowd.

SPEAKER: You may be wondering who Jesus Christ was. Jesus Christ was one of God's Workers who was born here on earth 2000 years ago. The purpose of his life was to bring a message to the inhabitants of earth of that time. The message was to love their fellow man and to live in peace. He tried to direct mankind away from what might be called the "Dark Side" of the human species. Those are the characteristics that are responsible for wars, murder, selfishness, greed, violence, aggression, hatred, indifference and the cruelties that man perpetrates upon his fellow man. It now is 2000 years later and things are pretty much the same. There have been technological advances, but man's "Dark Side" is still quite apparent.

VISUAL: God's Workers are shown above the earth in Jesus Christ's time.

SPEAKER: The purpose of God's Workers visit is the same as it was when Jesus Christ lived here. End wars, poverty and human suffering. The message will be stronger this time since God's Workers intend to perform miracles that will have a lasting impression on the inhabitants of earth.

VISUAL: Robert is shown speaking. ROBERT: After living a lifetime with the information that God's Workers have sent down to me, I can understand the confusion that Jesus Christ must have encountered in his lifetime. Since God's Workers could not inform Jesus Christ that he was one of them, and this story you are now watching was not to be sent down to earth at that time, Christ was left to guess who and what he really was. He may have sincerely believed he was the son of God since no other explanation was obvious. Christ died without knowing who he really was.

VISUAL: An ancient Temple is shown.

SPEAKER: What about Man and Religion? Since the beginning of mankind here on earth, man has turned to religion to explain the unknown. VISUAL: An electrical storm is shown. SPEAKER: Natural events such as erupting volcanos, earthquakes, lightning, typhoons and other natural events have been explained by earlier man as the doings of Gods. Angry Gods. VISUAL: Animals are on an altar. SPEAKER: They sacrificed animals to appease the Gods. Down through the years religion took root. VISUAL: People are shown in religious robes. SPEAKER: Many forms of religion sprang up. Each claiming that theirs was the true religion. No religion today is based of fact. That's why it's called faith. You must have faith in your belief even though there is no existing facts to support it.

VISUAL: Return to the Universe.

SPEAKER: Today, as before with earlier man, religion is an explanation for the unknown. Man has no knowledge explaining how the earth and the universe came into existence, so God is given credit. How could we have ever imagined that humans like us, only infinitely more intelligent, are responsible for our planet and the universe around it. Religion is an invention of man. The real God does not wish to be worshiped or prayed to. If you want to please him, help your fellow man. VISUAL: Shows religious people helping the needy. SPEAKER: God loves those who help him help the hungry and the needy. Buy gifts for suffering children who are blind, crippled and diseased. Seek out the hopeless, the homeless and the downhearted. Find the undernourished who are broken and in rags. Help them and the real God will honor you. Consider their circumstances as though they could be your circumstances. Say kind and pleasant things to others, be they true or not. Compliment ugliness, offer a smile for others. God's Workers bring the message from God that man does not need religion. There is no one, or nothing beyond the earth that is requesting your worship.

VISUAL: Shown are God's Workers stationed above the earth.

SPEAKER: On a day in the near future God's Workers will perform miracles that will astound the inhabitants of earth. When the day arrives that God's Workers are ready to perform these miracles, you will hear on National Television that the story you are now watching will be aired on worldwide television, on the Sunday that follows the announcement. The television presentation will consist of two halves. The first half entails the material we have already seen here in the Planetarium. The second half (which will now be shown) is an agenda of the miracles which are forthcoming. And two miracles will be performed right in the television studio.

SUNDAY FOLLOWING THE TELEVISED ANNOUNCEMENT

The program is aired on worldwide television.

VISUAL: Robert is seen in a television studio.

VISUAL: The first half of the program which we are now watching in the Planetarium is aired on worldwide television.
After it concludes.

VISUAL: The camera is on Robert. He speaks to the television audience.

ROBERT: God's Workers will now perform their first miracle. A bright white light appears in the television studio. As the light diminishes the figure of a man is seen. When the camera moves in for a closer look it becomes apparent who it is. It is John F. Kennedy, returned from the dead. President Kennedy is asked to take a seat while the show continues. Robert explains to President Kennedy that the reason God's Workers have restored him to life is because he is needed to act as a spokesman for God's Workers. If George Bush should win the 1992 presidential elections then President Kennedy will replace George Bush as President of the United States. If Bill Clinton should win the 1992 presidential elections then there will be two Presidents who will share the White House. President Kennedy will be involved with the miracles and endeavors of God's Workers. In the past Robert Wollner has made many appeals to President Bush requesting a Government Grant so that the efforts of God's Workers might

have a better chance of succeeding on this planet. President Bush has adamantly ignored these requests. While the world went on suffering, as God's Workers stood witness, President Bush showed no interest. God's Workers do not forget, and they do not forgive. Not with so much suffering on the earth. George Bush will be removed from office and shall be cast down in human history.

VISUAL: President Kennedy and Robert are shown in the television studio.

ROBERT: Robert discusses the crime of murder. The television audience is told that murder is a crime against God, and that all other crimes are crimes against man. Robert tells President Kennedy that it is the desire of God's Workers that every country in the world should build a National Execution Center where murders will be promptly executed after having a fair and just trial. A panel of judges may review the trial transcripts if the accused so requests. If the judges find discrepancies in the trial then a new trial can be ordered. If not then the accused will be transferred to the National Execution Center where the Commandment of the almighty God shall be carried out.

VISUAL: President Kennedy and Robert are shown again.

ROBERT: Robert tells the television audience about the "New World" that God's Worker will provide. One week later at an announced time, an enormous white light which is round in shape will dominate the night sky. When the light diminishes a new planet will be visible from the earth. And every night thereafter for an eternity the New World will be visible in the night sky. The New World will follow the earth in its orbit around the Sun. It will be 5 times larger than the earth. A brand new world, untouched by man, without pollution from man's presence, fully stocked with animals, sea life and natural beauty. This is God's Workers gift to the inhabitants of earth. Any night thereafter, should any person on earth look into the night sky, the New World will be visible as a reminder that God's Workers once visited the earth and left this planet behind.

VISUAL: President Kennedy and Robert are shown talking in the television studio.

ROBERT: Robert informs the television audience that God's Workers will perform another miracle right in the television studio. He states that God's Workers are concerned about the damage, from pollution, that the internal combustion engine is doing here on earth and that this method of transportation is depleting our planets natural oil resources. Robert then informs the audience that God's Workers will provide an automobile that runs on a new engine principle which requires no fuel to operate.

VISUAL: Robert points his right hand and a brilliant white light appears in the studio. As the light diminishes it is apparent that an automobile is emerging. President Kennedy inquires how it operates. Robert says, there is a manual in the glove compartment that shows detailed information and pictures as to how to build such an engine in automobile manufacturing plants.

VISUAL: President Kennedy and Robert are shown in the studio again.

ROBERT: Robert then informs the television audience that God's Workers will

provide man with the opportunity to look down on his own planet. On a day to be announced in the near future, a bright light will appear just above the earth. When the light diminishes the "City in Space" will be a reality. The City in Space, which will be administered by President Kennedy's Office, is a massive space platform just above the earth that will incorporate technology that can support human life. Hotels, motels, restaurants, shops and viewing areas will abound at the City in Space. VISUAL: A simulation of the City in Space is shown. SPEAKER: Those who vacation at the City in Space will witness breathtaking views of the earth, the moon, the New World and the universe. While the New World is stationary in the sky, the City in Space will orbit the earth. As a gift to mankind here on earth, when God's Workers leave our planet and go on to the next planet to help the people there, this City in Space will remain behind. When future generations of earth visit the City in Space they will know that God, the Supreme Being and God's Workers really do exist.

VISUAL: Return to the studio with Robert and President Kennedy.

ROBERT: Robert informs the television audience about the Starship and the Teleporters that God's Workers will provide for mankind. In order for people to journey to the New World and the City in Space, God's Workers will provide Teleporters in selected cities. A Teleporter is a high-tech transmitter of the future. Instead of transmitting energy, like television or radio waves, the Teleporter transmits matter or physical objects. A Teleporter was often seen in the television series Star Trek, where Captain Kirk and crew members would beam down to the surface of a planet. Or beam up. Television and Motion Picture science fiction often tells the future. With God's Workers stationed above your planet the future is here today.

VISUAL: The New World is seen from the City in Space.

SPEAKER: Persons wishing to visit the New World or the City in Space must first obtain authorization from President Kennedy's office. Once authorization is obtained they may proceed to a city where a Teleporter exists and teleport to their destination. VISUAL: People are shown waiting in line with their luggage to teleport up, while others are shown teleporting down on a different teleporter. SPEAKER: Vacations to the City in Space will most likely be available through travel agents. VISUAL: Elementary School children are shown at school. SPEAKER: Because God loves the children of the earth, and they are so special to him, Free, 3 day vacations will be made available to Elementary School, Middle School and High School classes for trips to the City in Space. VISUAL: Groups of children are shown at the City in Space. Companies who lease hotel or motel space through President Kennedy's office will be required to give free rooms and meals to these students.

While visiting the Fun Park you may have seen the "Starship Tour". VISUAL: The Starship at the Fun Park is shown. SPEAKER: The Starship is comparable, but not identical, to a Starship that God's Workers will provide for mankind. This will give astronauts the capability to travel in space. VISUAL: A fleet of Starships is shown. SPEAKER: And one day the inhabitants of earth will duplicate the Starship and build fleets of Starships that will allow the peoples of earth to expand their civilization into space and beyond. It is the destiny of man to colonize space. To reach beyond the earth, establish outposts and cities on other worlds. This Starship is a step in the right

direction. The new Starship will be turned over to NASA. VISUAL: A Starship is shown at NASA headquarters in Florida.

VISUAL: Return to the studio with Robert and President Kennedy.

ROBERT: Robert tells the television audience what will be done for World Peace. God's Workers have come to earth to end wars. Under the direction of President Kennedy, a "Sovereign Zone" will be built in or near the City of Washington D.C.. The Sovereign Zone will be the seat for the World Government. VISUAL: A foreign country's leader is shown on an airplane.

SPEAKER: Foreign leaders and representatives can fly in and fly out without ever touching American soil. VISUAL: The foreign leader is shown at a hotel. SPEAKER: The hotels, motels, shops and restaurants within the Sovereign Zone will accommodate visitors who speak almost any language. It will be a small city with its own airport. VISUAL: A diagram is shown of the World Government with its branches. The World Government will consist of three branches. The Bench of World Officials, the House of Nations and the House of Leaders. The World Court System will assist countries with their disputes, while the World Peacekeeping Forces will maintain peace in the world. War and aggression will be forbidden. VISUAL: Military hardware is shown. SPEAKER: All countries will be instructed to turn over all military weapons and hardware to the World Peacekeeping Forces. Thereafter, no country will be allowed to manufacture, store, or possess weapons of war. This right lies solely with the World Peacekeeping Forces which is the military branch of the World Government. VISUAL: Soldiers are shown. SPEAKER: The World Peacekeeping Forces will establish a World National Guard so that leaders of countries will have a military force available to them. VISUAL: A flag is shown with the planet earth on it. SPEAKER: The World Government will be called "The United Countries of Earth".

VISUAL: President's Nixon, Carter and Reagan are shown.

SPEAKER: Although not stated on television, three former presidents will be recruited to join president Kennedy's staff. These presidents are Ronald Reagan, Jimmy Carter and Richard Nixon. Since these men are now older, when a meeting takes place between them, their wives and Robert Wollner, God's Workers will transform them and make them younger. Their wives will also benefit from this miracle. VISUAL: Richard Nixon is shown. SPEAKER: Richard Nixon will be in charge of establishing World Peace. He will initiate the building of the Sovereign Zone, implement the World Government, organize the World Peacekeeping Forces and gather up all military weapons in the world and stockpile them. VISUAL: Ronald Reagan is shown. SPEAKER: Ronald Reagan will administer the New World, the City in Space, the Starship, the Teleporters and the non-fuel vehicle that God's Workers sent down to earth in the television studio. VISUAL: Jimmy Carter is shown. SPEAKER: Jimmy Carter will be in charge of coordinating miracles that are forthcoming and the documenting of miracles for history.

VISUAL: Return to the studio with Robert and President Kennedy.

ROBERT: Robert tells the audience that the world's sick will be healed through the miracles of God's Workers. By Time Zones the miracle will occur. Starting with Pacific-Standard Time. Each hour a new Time Zone will witness the miracle. VISUAL: People are seen in hospitals. SPEAKER: Throughout the world millions are suffering and in despair. God's Workers are suffering

with them and can feel their pain. A special miracle will be provided that will heal the multitudes. The sick, the insane, the blind, the crippled, the deaf and diseased. Those with Aids, cancer, and a thousand other afflictions, can look forward to the day when all will be restored to perfect health. VISUAL: A crippled child is shown limping as he walks. A bright light appears around him. The light diminishes and the child walks normal. SPEAKER: Those with other ailments such as addictions to drugs, alcohol, tobacco, overeating, etc. will be freed from addiction by this miracle. God's Workers will intervene in further addiction. Crops such as tobacco, coca, marijuana and other crops that are responsible for addictions, will thereafter not grow in any soil on earth. Some afflictions may vanish and never be seen again, such as Aids. Homosexuality will become a thing of the past, Dwarfs will begin to grow, and miracles will abound as the afflicted rise up to perfect health. For these are the times when God's Workers have come to our planet and miracles are common place.

VISUAL: Return to the studio with Robert and President Kennedy.

ROBERT: Robert tells the world audience how God's Workers will *** Remove, Clean, and Restock the waters of the earth. ***

As incredible as it might sound, God's Workers intend to remove all the waters from the surface of the earth. Drinking, bathing and cooking water are a necessity of life. Enough water will remain for these necessities.

VISUAL: Oceans and lakes are seen disappearing. SPEAKER: Oceans, lakes, and rivers will be drained almost instantaneously. The owners of boats and ships who don't make prior preparations for the event may find their vessel sitting on the bottom of the ocean or lake waiting for God's Workers to refill the chasm. VISUAL: Television helicopter news teams are photographing the ocean floor. SPEAKER: This miracle will give mankind the opportunity to see and photograph the landscape which exists at the bottom of the world's oceans and lakes. VISUAL: A shipwreck is seen with people exploring it. SPEAKER: Shipwrecks undiscovered for centuries lying at the bottom of the ocean will be visible. Their locations can be mapped for future reference. Scientific teams can visit the shipwrecks during the period the water is removed. The purpose of removing the water is to repair the damage mankind has done. VISUAL: Sewage is shown going into the ocean. SPEAKER: During his stay on this planet man has dumped his trash, chemicals, wastes and pollution into the world's lakes, rivers and oceans. Lakes and rivers flow into the oceans which have become a giant receptacle for man's waste and discard. God's Workers will be busy cleaning and restocking the waters that will be returned to the oceans, lakes and rivers. And once returned, these waters will contain an abundance of life. The oceans, lakes and rivers will be rich with life once again.

VISUAL: Return to the studio with Robert and President Kennedy.

ROBERT: Robert tells the audience that God's Workers will *** Remove, replenish and increase the animals of the earth ***

SPEAKER: For a period in the future the earth will be void of all animal life. Birds, house pets, farm animals, ranch animals, forests, zoos or wherever the animals exist the world over, God's Workers will gather them up. When the animals are returned to the earth, they will be returned in great numbers. The earth will be restocked with animal life. There will be many surprises in store for mankind. Many new species of animals will be brought

onto the earth that man has never seen before. Some of the present animals may be different. Farm animals may reproduce at a greater rate to provide more food for humanity. Certain animals and insects that are harmful or a pest to man will disappear forever. Such as the mosquito which carries diseases like the plague, the house fly, rats, locust, and other undesirables will vanish and never be seen again. After the miracle, through the efforts of Jimmy Carter, laws will be established in the constitution of the World Government. A covenant will thereafter exist between mankind and God's Workers. Man shall not abuse, molest or destroy the animals of the earth, nor bring them to suffer harm without a cogent reason. And that man shall look after the animals of the earth who have not the intelligence to care for themselves. Such cruelties as hunting animals for sport, using animals for scientific research, caging them in zoos, killing them for profit, such as to obtain ivory, will be abolished and unlawful. Man shall understand his responsibility towards the animals and sea life of the earth. And man shall not deplete, destroy and devastate the bounty of the oceans by overfishing or for profit. And further, it shall be written in the covenant, that the future inhabitants of earth will build factories that produce nutritional food, made possible through advanced science, to feed the animals of the earth. And they shall look after them as humans on other planets have managed to do. The World Government shall be relied upon to carry out the pledge.

VISUAL: Return to the studio with Robert and President Kennedy.

ROBERT: Robert tells the television audience that God's Workers intend to "Calibrate our Solar System".

Previously it was explained that humans like us are responsible for the existence of our Solar System. And these humans are infinitely more intelligent than we are. But still, they are humans and humans do make mistakes. Manufacturing errors and defects, instrument calibration mistakes, misjudgments in design. These can lead to anomalies in the completed project. Should any mishaps exist in manufacture or construction that went unnoticed, they would remain until God's Workers "Calibrate the Solar System". Humans who build miniature universes rely on the fact that God's Workers will "check their work" and correct mistakes. Once again, this is God's method of watching over us. When humans finish building their miniature universes, thereafter they become, God's Workers domain. When God's Workers Calibrate our Solar System to ensure that all scientific systems are working properly, the earth may be removed from the solar system for a brief period. When the earth is returned there "may be" or "may not be" changes. Additional planets could be added to the solar system. These planets may be rich in ores, minerals and substances that man will need to advance his race into the future. The earth's scientific systems could be different. We may be nearer or farther from the Sun. Our planet could travel faster or slower in its orbit around the Sun. The Sun could be different. It could be larger or smaller or hotter or cooler. The speed at which our planet rotates, causing day and night, could be altered. If the planet turns slower the days will be longer and hotter. If it turns faster, then shorter, cooler days will be in order. The seasons of Summer, Winter, Spring and Fall could be longer or shorter, if the frequency at which the earth tilts back and forth is revised. The moon, the New World and the City in Space will still be with us and visible from earth. Contrary to what

people might think, these scientific calibrations that planets operate by are not so perplexing and mysterious as one might suspect. It doesn't take a God to do it.

We can be sure that the Ionosphere will be corrected, the Green House Effect problem will be eliminated and that God's Workers will put all in its proper scientific order. If nothing is changed then we can be sure that the builders of our solar system did a pretty good job.

VISUAL: Return to the studio with Robert and President Kennedy.

ROBERT: Robert informs the world audience that this will be the final miracle disclosed. And that we will wait and see what miracles God's Workers will provide beyond these. Before concluding we will see the methods through which God's Workers will end poverty and human suffering in the world. In order to end poverty in the world, the world's economies must be transformed, so that they perform in a prosperous manner. The Economic Principles and Methods offered by God's Workers will accomplish this.

VISUAL: Scenes from Bangladesh and Calcutta, India are shown where unbearable poverty exists. The neighborhoods are broken down, and dilapidated structures.

SPEAKER: In countries where cities are old, and the structures are dilapidated and run down, these cities will be abandoned and destroyed. Using concepts such as: Assembly Line Construction and the Printing Press Bank, new cities will be built. These concepts will not be explained at this time. God's Workers make use of many new concepts and methods that man has never conceived of before. Man must not judge or question the methods of God's Workers which have proven successful on many planets.

VISUAL: Shown is an entire city under construction. As far as the eye can see construction is taking place. A helicopter flies over and it seems to stretch for miles. Then modern Interstate Highways are shown being built.

SPEAKER: Utilizing the labor of millions, the world's largest construction crew will be working on Assembly Line Construction projects. Assembly Line Construction allows unskilled laborers to learn a simple construction task in a construction school and then to perform that task over and over in an assembly line fashion. Just as an automobile is assembled, construction has been broken down into small construction tasks. This allows millions of unskilled workers to build entire cities quickly. Through this method God's Workers will build "Scientific Cities", with economies that function in a scientific manner to ensure prosperity. God's Workers know Economic Principles that can guarantee continual prosperity. Just as the ancient Egyptian pharaohs built cities with the labor of tens of thousands, God's Workers will build entire middle class nations with the labor of millions. New middle class tract homes, modern schools, businesses, factories, shopping centers, streets, highways and modern Interstates. Hundreds of millions of impoverished people the world over will be dropped into a middle class lifestyle...

VISUAL: Shown are God's Workers coming to the earth in the future. As they

look down upon the planet earth they see a world with clean modern cities, where wars are a thing of the past, crime is almost non-existent and people are prosperous and happy. Then one of God's Workers thinks back in retrospect to what the earth was like before their last visit, when wars and poverty and human suffering were common place. God's Workers are then seen traveling to the New World. They look down upon the New World and see that man has made good use of their gift. Then they are seen traveling off into space to other destinations.

VISUAL: Shown on the dome ceiling: "The End"

SPEAKER: And that will end our program. I wish to thank everyone for attending. The Gift Shop is now open for those who wish to browse. The Book of God's Workers is on sale, as well as albums and post cards with scenes from the story. Thank you all for coming. The lights go on and the people exit.
