

# Septic Tank Pump Outs

## A Program for White River Residents

DUBOIS, DAVIESS, MARTIN, PIKE COUNTIES

### Grant Program Offering Discounted Septic Tank Pump Outs

Homeowners with septic systems are reminded that regular septic tank maintenance is important for protecting both their property and local waterways.

Experts recommend septic tanks be pumped every three to five years, depending on household usage and tank size. Without regular maintenance, sludge buildup can eventually lead to costly system failures.

To help residents maintain their systems, the **Lower East Fork White River Watershed 319 Grant** is offering septic tank pump outs at a discounted rate for eligible homeowners located within the watershed area.

Reimbursements will be provided after service is completed by a selected Registered Septic Pumper.

Residents interested in participating — or those unsure whether they live within the watershed boundaries — are encouraged to reach out for more information.

Please call or text Watershed Coordinator **Julie Loehr at 812-779-7924** or email her at [Julia.loehr@in.nacdnet.net](mailto:Julia.loehr@in.nacdnet.net).
