Join us for a plant tour of Endres Mfg. in Waunakee, WI on Thursday, November 12th at 2:30 PM. Endres is celebrating 100 years in business this year, so it's a great time to see the shop. ***Note that this is a tour only, so there is no cost as there won't be a reception following the tour.**

Endres is an AISC-Certified fabricator. Their shop handles welding, cutting, bending, drilling, punching, and cambering. They supply house beams for local home builders and railings for residential clients, and they take on industrial work like catwalks and tank systems. They've also worked with a wide range of metals and fabrication methods.

Their extensive machining department is a big part of what they do. The crew there is highly skilled and specializes in custom prototyping. Between MIG and TIG welding, spot and stud welding, plate shearing, saw cutting, custom plate burning, drilling, tapping, reaming, countersinking, deburring, grinding, and polishing, there's a lot to see. They also run a Pier and Shoreline Division that builds piers and docks, marine boat rail track systems, and pier accessories.
